Lori Aldana

Released September 15, 2015

**THE 2015 INLAND EMPIRE
ANNUAL SURVEY**

**We would like to thank the following organizations which
generously contributed to this survey:**

**PLATINUM SPONSOR:
California State University, San Bernardino**

**SILVER SPONSOR:
Mojave Water Agency
City of Rancho Cucamonga**

**BRONZE SPONSOR:
Omnitrans**

INTRODUCTION AND METHODS

INTRODUCTION

The Institute of Applied Research (IAR) is pleased to present the results of the **2015 Inland Empire Annual Survey**. This annual survey has been conducted in San Bernardino County (and, at times Riverside County) since 1996. This year's survey is based solely on data collected throughout San Bernardino County. It was made possible through the generosity of our sponsors: **California State University, San Bernardino; Mojave Water Agency; The City of Rancho Cucamonga; and Omnitrans**.

The purpose of the survey is to provide policy-based research that relates to issues important to the Inland Empire. This Inland Empire Annual Survey provides decision-makers with objective, accurate and current information for:

- ◆ **Evaluating key public and private sector services and activities** (e.g., retail services, education, transportation);
- ◆ **Describing the public's perceptions** of such issues as: quality of life, the state of the local economy, perceptions of the region as a place to live and work, problems and issues facing the county (e.g., crime, pollution, traffic congestion, and economic development);
- ◆ **Providing a regional focus** for the on-going discussion of key local/regional issues; and
- ◆ **Disseminating a coherent picture of San Bernardino (and often Riverside County) residents' views, beliefs, and demographic characteristics** to key decision makers within and outside the county, thus enabling comparisons to other counties.

The Inland Empire Annual Survey also includes (on a space available basis), some *proprietary items* designed to meet specific information needs of sponsoring agencies / organizations within the region.

Apart from the objectives listed above, IAR is committed to promoting regionalism and cooperation. It is hoped that the work involved in the Annual Survey and other IAR projects will promote the Inland Empire as a significant region in the state. In this sense, IAR serves as a valuable resource in the region for initiating community discourse and helping to inform the public, officials, and citizens.

THE QUESTIONNAIRE

In order to track responses over time and provide the opportunity for longitudinal analysis, the Inland Empire Annual Survey has included a series of baseline questions which have appeared on the survey over the last eighteen years. These questions were designed to elicit residents' perceptions about their quality of life and economic well-being, their views about the pressing issues of the day, and their ratings of public services and agencies. In addition, a number of standard demographic questions have been included for tracking purposes and for cross-tabulation of findings. Tracking questions, of course, provide public agencies and businesses with trend data often needed in policy making and outcome assessments. These questions are also valuable in comparing the Inland Empire with other regions in the state and the nation. And of course our sponsors submitted questions for their proprietary use.

Once the questionnaire was finalized, a Spanish version of the questionnaire was produced. The questionnaire is attached as Appendix I.

SAMPLING METHODS

Telephone survey respondents were randomly selected from a comprehensive sample frame consisting of all telephone working blocks which contain residential telephone numbers (including cell phone numbers) in San Bernardino County. The numbers were then screened to eliminate business phones, fax machines, and non-working numbers. Finally, in order to ensure that some unlisted phone numbers were included in the sample, the original list was supplemented by using the working number as a seed number from which one other number was generated by adding a constant. To the extent possible, therefore, each resident within the county with a telephone (**including cell phones**) had an equal chance to be included in the survey.

In order to ensure accuracy of findings, a total of 1,115 residents were surveyed from San Bernardino County (950 overall in the county plus 165 over-sample at the request of one of our sponsors) for a 95 percent level of confidence and an accuracy of approximately plus/minus 3.2 percent. Telephone interviews were conducted by the Institute of Applied Research at California State University, San Bernardino using Computer Assisted Telephone Interviewing (CATI) equipment and software. The surveys were conducted between March 4 and March 19, 2015. Calls were made weekdays from 3 to 9 PM, Saturdays 10 AM until 5 PM, and Sundays 1 to 7 PM.

SAN BERNARDINO COUNTY FINDINGS

Quality of life is a difficult concept to define and measure with precision. In general, quality of life is an amalgamation of a variety of factors which add up to “general well-being” of individuals and societies. It is evaluated and monitored by using measures of economic stability, public health, climate, public safety, availability of housing, opportunities for education, availability of arts and culture, public service accessibility and quality, and a variety of other factors.

Following are the major findings from this year’s quality of life survey in San Bernardino County. Findings are presented by conceptual category (e.g. economic evaluations, crime – perceptions and reality, ratings of the county as a place to live, evaluations of selected private and public services, commuting, and confidence in elected officials). Where possible, we present longitudinal analysis and point out noteworthy trends over the past 19 years (perhaps one of the most important contributions of this survey). We also break the data down by demographic subgroup and present crosstabs, where meaningful.

The reader is encouraged to view the full data display of weighted countywide findings (Appendix II).

Economic Evaluations

OVERVIEW: The number of residents who rated the County’s economy as “excellent” or “good” improved significantly this year but still remained lower than pre-recession levels. There continues to be an improvement in the number of respondents reporting that they are better off financially than they were a year ago, and optimism about their financial future has increased. Younger people seem to feel more optimistic about their financial futures than do older

people; renters are more optimistic than home owners; and Hispanics have a higher likelihood than non-Hispanics to think they will be “better off” financially in the coming year.

San Bernardino County’s economy faltered in the late-2000s, as did the economy of other Counties throughout the nation. The economy is still weak overall but recovering slowly – in fits and starts – as evidenced by primary data such as indices from the Inland Empire *Report on Business* published monthly by the Institute of Applied Research, and secondary data such as unemployment rate, etc. For example, in July the Inland Empire unemployment rate was 7.1% (7.3% in Riverside County and 6.9% in San Bernardino County), a significant improvement from the year-ago estimate of 8.9%. This compares with an unadjusted unemployment rate of 6.5%

for California and 5.6% for the nation during the same period.¹ Unemployment has significantly decreased from the high of 14.8% in July 2010, but it is still far from the December 2007 figure of 6% right around the time that the nation went into recession. Further, it is widely anticipated that the Fed will start raising its benchmark interest rate later this year.

Have San Bernardino County residents perceived the improvement in the County’s economy? As noted in Table 1 below, in the 2008/09 survey there was a sharp decline in the number of respondents who rated the economy as “excellent” or “good” (Question B8), dropping from 40% in 2007/2008 down to 12% in 2008/2009. The numbers decreased further to only 9% in 2010. The good news is that the numbers have increased somewhat since that time, with 25% now rating the County’s economy as “excellent” or “good.” The bad news is that the figure is still significantly below pre-recession levels. Further, it must be mentioned that although we have chosen to focus on the positive evaluations (the 25% who said the economy is “excellent” or “good”), the vast majority of residents (the other 75%) rate it as only “fair” or “poor.”

1. State of California Employment Development Department

There were no statistically significant differences in these evaluations for subgroups based on age, income, education, length of residency in the county, or ethnicity. There were also only slight differences based on the political party of choice: the data show that 27% of Democrats gave high ratings of the county’s economy (up from 18% last year), as did 26% of Republicans (up from 16% last year) and 19% of Independents (up from 13% last year). Perhaps most interesting is that 23% of people who are registered to vote rated the county’s economy as “excellent” or “good” as opposed to 31% of those who are NOT registered to vote. One hypothesis for this finding is that research has shown that voters “worry” about the nation as a whole as well as their own economic well-being, whereas non-voters are more focused on the latter.² Thus voters might be more hesitant than non-voters to believe that the economy is back on a strong footing.

Asking about the county’s economy is one thing, and asking about a person’s personal financial situation is another. Respondents were asked: “In comparison to a year ago, would you say that you and your family are financially better off, worse off or the same?” (Question B6).

2. American Government: Institutions and Policies, Wilson and Dilulio, 12th Edition, 2015.

It is encouraging that the numbers are almost back to pre-recession levels (2007/08), with 24% now saying that their finances are “better off” compared with a year ago (only a slight increase from last year’s 22%, but a welcome figure in a hopefully continuing upward trend).

An analysis was conducted to determine if there are meaningful differences in shifts in personal finances based on age, ethnicity, home ownership, income or educational attainment; and some differences were found (see Table 3 below). As one would expect, people with higher levels of income were more likely to report feeling “better off” than those making less money. Younger people were more likely to report feeling financially “better off” than are older individuals (seniors in the “65 or older” age category), possibly due to the relative ease with which younger people can find a job in a post-recession economy.

For the last two years we reported that non-Hispanics felt “worse off” in greater numbers than Hispanics, however this year there were no statistically significant differences between Hispanics and non-Hispanics. Home ownership *does* continue to be a factor in feelings about finances, with home owners perceiving more stability in their finances than renters. Specifically 81% of owners rate their finances as the same or better, as opposed to 76% of renters. It appears that the improvement in the housing market has eased residents’ financial worries somewhat.

Finally, last year we reported that people with a high school degree or less showed a significant increase in the percent feeling “better off” (an increase from 15% two years ago to 23% last year). This year’s results are similar to last year’s; with 22% of those with no college education reported feeling “better off.” There is some indication (although not statistically significant) that those with more education have higher rates of feeling “better off” than those with less education (22% of those without any college, 24% of those with some college, and 26% of those with a college degree).

Table 3. In comparison to a year ago, would you say that you and your family are financially better off, worse off or the same?"

2015 Selected Subgroup results

		% Better off	% Same	% Worse Off	Pattern
Age	18 to 34	34	53	13	Younger people are more likely to feel "better off," senior citizens are more likely to feel "worse off"
	35 to 64	27	53	20	
	65 or older	15	62	23	
Ethnicity	Hispanic	27	51	22	Hispanics are slightly more likely to feel "better off" than non-Hispanics (n.s.) *
	Non-Hispanic	23	58	19	
Home Ownership	Rent	26	50	24	Renters feel slightly "worse off" financially than owners
	Own	23	58	19	
Income	Less than \$35,000	19	52	29	Those with higher incomes feel financially "better off" since last year than those with lower incomes
	\$35,000 to < \$80,000	24	56	19	
	\$80,000 or more	33	54	13	
Education	High School Graduate or less	22	59	19	Those people with college degrees are most likely to report being "better off" (n.s.)*
	Some college	24	54	22	
	College degree	26	53	20	

* "n.s." means "not statistically significant"

The above analysis measures perceptions about changes that have *already* occurred in people's financial footing. But what about the future? To measure people's optimism (or pessimism) about their future finances, respondents were asked "now looking ahead, do you think that a year from now you and your family will be better off, worse off, or just about the same as you are now?" (Question B7). The last time a majority of respondents said they expect to be better off was in 2006. The good news, however, is that the numbers are trending in a positive direction, with 42% of respondents saying they expect to be better off next year (up from 39% last year), and another 48% saying they should be "about the same" as they are now.

Only 10% expect to be worse off... a figure virtually identical to the pre-recession 2007/08 survey.

Table 4. Now looking ahead, do you think that a year from now you and your family will be better off, worse off, or just about the same as you are now?

	% Better Off	% Same	% Worse Off
1997 Survey	52	43	5
1998 Survey	57	38	5
1999 Survey	59	37	3
2000 Survey	57	36	4
2001 Survey	53	40	3
2002 Survey	51	39	7
2003 Survey	53	40	7
2004 Survey	45	47	8
2005 Survey	51	42	7
2006 Survey	51	41	8
2007 / 08 Survey	43	48	9
2008 / 09 Survey	35	47	18
2010 Survey	42	44	14
2011 Survey	39	46	15
2012 Survey	33	49	19
2013 Survey	38	47	15
2014 Survey	39	48	14
2015 Survey	42	48	10

Once again interesting patterns arise from sub-group analysis. Specifically, people with the lowest level of education feel more optimism about their financial futures than do those with higher levels of education (48% of those without any college education vs. 37% of those with a college degree expect that a year from now they will be better off than they are today). Younger people seem to feel more optimistic about their financial futures than do older people, with 60% of 18 to 34 year olds expecting to be better off by next year vs. only 46% of 35 to 64 year olds and 23% of those in the 65+ age group. Renters are more optimistic than home owners that the future will be better than it is today (perhaps because owners are more “settled” and “stable” than renters and don’t expect as many changes), and Hispanics have a higher likelihood of thinking they will be “better off” than non-Hispanics.

Table 5. Now looking ahead, do you think that a year from now you and your family will be better off, worse off, or just about the same as you are now?

		% Better off	% Same	% Worse Off	Pattern
Age	18 to 34	60	34	6	Younger people feel more optimistic about the future than older people
	35 to 64	46	47	7	
	65 or older	23	59	18	
Ethnicity	Hispanic	54	37	9	Hispanics feel more optimistic than non-Hispanics
	Non-Hispanic	36	53	12	
Home Ownership	Rent	53	37	10	Renters feel more optimistic than home owners
	Own	36	52	12	
Income	Less than \$35,000	42	44	14	People in lower income categories expect to be worse off in greater numbers than those with higher incomes (n.s. *)
	\$35,000 to < \$80,000	44	45	11	
	\$80,000 or more	43	50	7	
Education	Some high school or less	48	40	12	People with the lowest level of educational attainment feel more optimistic than those with more education.
	Some college	40	49	12	
	College degree	37	53	10	

* “n.s.” means “not statistically significant”

Two years ago there was no statistically significant difference in optimism based on income, and that is the case again this year although there is a slight trend indicating that people in lower income categories tend to expect to be worse off in greater numbers than those with higher incomes.

Crime...Perceptions and Reality

OVERVIEW: *Fear of crime is unchanged from last year, although since 2007 there has been a slight upward trend in fear. This increase may be due to changing demographics, budget cuts resulting in decreased levels of law enforcement staffing, or the effects of prison realignment. Fear of crime is greatest among Hispanics (as opposed to non-Hispanics). Fear of crime was highest in the City of San Bernardino and lowest in the Rancho Cucamonga/Alta Loma area.*

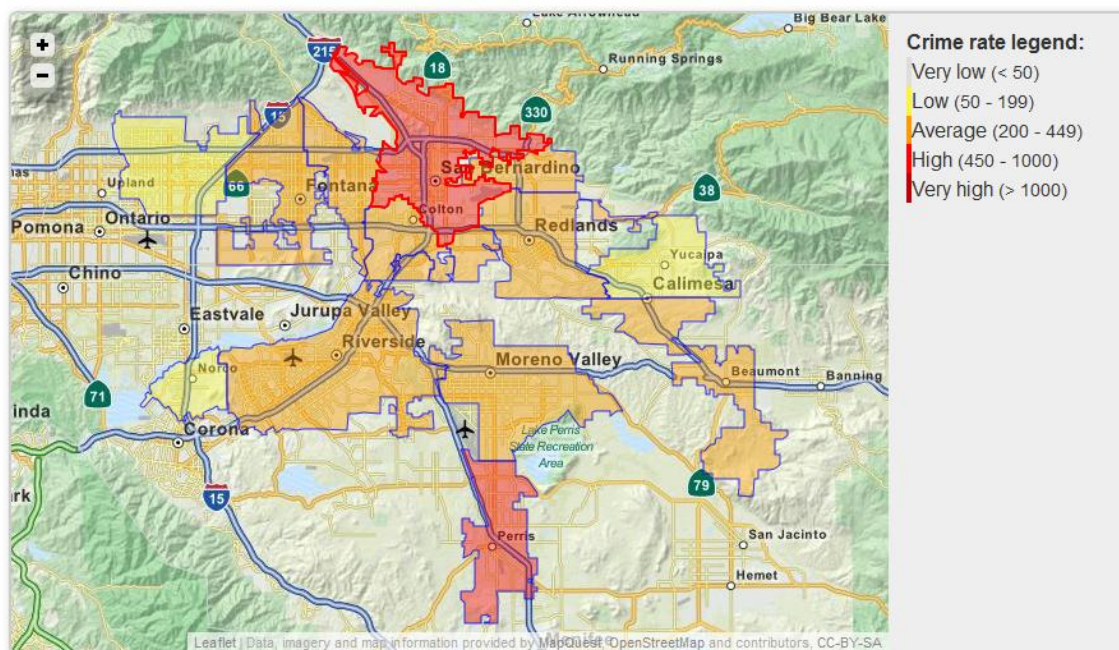

Virtually every quality-of-life/“better-life” index includes questions regarding crime and safety, and sections of the County (particularly the City of San Bernardino) certainly have been highlighted in the media for their crime problems. Consider the recent June 14, 2015 article in the Los Angeles Times entitled “San Bernardino: Broken City” which highlighted the City’s bankruptcy and crime issues.³ The City of San Bernardino is #74 on the list of the top 100 most dangerous American cities with 25,000 or more people (based on the number of violent crimes – murder, rape, armed robbery, and aggravated assault – per 1,000 residents⁴). The City has a crime index of 5 (where 100 is safest). That indicates that it is safer than only 5% of the cities in the US. Of course, other areas of the County have significantly lower levels of violent crime (e.g. Chino Hills with a rating of 60, Rancho Cucamonga with a rating of 33, and Claremont with a rating of 29). The map below (next page) shows the distribution of crime throughout the county and surrounding areas.⁵

4. <http://www.neighborhoodscout.com/neighborhoods/crime-rates/top100dangerous/>

5. <http://www.city-data.com/crime/crime-San-Bernardino-California.html>

Crime rate in San Bernardino, California (CA): murders, rapes, robberies, assaults, burglaries, thefts, auto thefts, arson, law enforcement employees, police officers, crime map

Last year we reported that crime had declined between the first half of 2012 and the first half of 2013 in five out of six of San Bernardino County's most populated cities (based on the most current figures available in the FBI Preliminary Semiannual Uniform Crime Report). This year's data is not as rosy, with crime decreasing in only three out of the six cities⁶. For example, violent crime was down 23.3% in Rancho Cucamonga, 9.7% in Victorville, and a whopping 40.1% in Rialto. Unfortunately violent crime increased 11.3% in San Bernardino, 9.2% in Ontario, and a meager 0.3% in Fontana.

Controlling crime is obviously vital if county residents are to maintain a reasonable quality of life, and reducing the *fear* of crime is also an important objective to most police departments. Why target fear of crime? As noted by Wesley Skogan of Northwestern University, an expert on crime and policing:

The costs of fear are both individual and collective. Fear can confine people to their homes, and it undermines their trust in their neighbors and, especially, in their neighbors' children. Fear is a key "quality of life" issue for many people. Research

6. <https://www.fbi.gov/about-us/cjis/ucr/crime-in-the-u.s/2014/preliminary-semiannual-uniform-crime-report-january-june-2014/preliminary-semiannual-uniform-crime-report-january-june-2014>

also indicates that concern about crime has bad consequences for the neighborhoods in which we live. Fear leads to withdrawal from public life...Fear undermines the value of residential property and thus the willingness of owners to maintain it properly. When customers – and even employees – fear entering a commercial area, the viability of businesses located there is threatened.^{7,8}

Fear of crime does not always change in lock-step with actual crime statistics. Indeed, even if the crime statistics decrease significantly, it often takes many years before people’s fear of crime subsides. This year, when asked: “How fearful are you that you will be the victim of a serious crime, such as a violent or costly crime” (Question B9), nearly four in 10 respondents (39%) indicated that they are “very fearful” or “somewhat fearful.” The level of fear of crime has remained stable for the past three years, although there has been an overall increase in fear of crime since 2007.

8. http://cops.usdoj.gov/html/dispatch/December_2008/print/crime_fear_print.htm

Many more Hispanics than non-Hispanics expressed that they are “very” or “somewhat” fearful (44% of Hispanics vs. 34% of non-Hispanics) of being the victim of a serious crime. There were no statistically significant differences in fear of crime based on age although there younger people were slightly more fearful than older people: 43% of 18 to 34 year olds, 38% of 35 to 64 year olds, and 32% of people 65 or older expressed at least some fear.

Table 7. How fearful are you that you will be the victim of a serious crime, such as a violent or costly crime?

2015 Selected Subgroup results

		% Very/ somewhat Fearful	% Not too fearful	% Not at all fearful	Pattern
Age	18 to 34	43	35	23	Young people are more fearful than older people (n.s.)*
	35 to 64	38	37	25	
	65 or older	32	42	26	
Ethnicity	Hispanic	44	31	25	Hispanics have a higher level of fear than non-Hispanics
	Non-Hispanic	34	41	24	
Home Ownership	Rent	40	35	25	Renters are slightly more fearful than homeowners (n.s.)
	Own	36	40	25	
Income	Less than \$35,000	36	36	28	Middle income people are slightly more fearful than those with higher income (n.s.)
	\$35,000 to < \$80,000	40	35	25	
	\$80,000 or more	33	44	23	
Education	Some high school or less	36	36	28	People with some college are slightly more fearful than those with a college degree (n.s.)
	Some college	40	37	24	
	College degree	35	42	23	

* “n.s.” means “not statistically significant”

Last year we found that respondents who rent (as opposed to own) their living quarters and those in the lower income categories expressed a higher level of fear of crime than did those with higher incomes. We hypothesized that since renters and the lower income group live (and perhaps work) in neighborhoods with higher crime rates, there could be an increased level of fear/concern about crime. That was not the case this year. People in the \$35,000 to \$80,000 income category had a higher level of fear of crime than either those making less than \$35,000 or more than \$80,000, but that difference was not statistically significant.

A city-specific analysis is always interesting, but only a few cities had sufficient sample size to conduct a full analysis with any level of confidence. With that caveat, the following table shows the fear of crime among respondents from the cities with the largest sample sizes. As might be expected, respondents from the City of San Bernardino exhibited the highest level of fear of crime, and Rancho Cucamonga/Alta Loma had the lowest level of fear.

Table 8. % “Very Fearful” or “Somewhat Fearful” of Being the Victim of a Serious Crime

San Bernardino (<i>city</i> , not county)	61%
Victorville	49%
Fontana	44%
Hesperia	37%
Rialto	33%
Ontario	31%
Chino	30%
Rancho Cucamonga/Alta Loma	25%

The results in this section of the report may appear to be “run of the mill,” however they should be seen as a call to action for police departments, city governments, neighborhood watch groups, economic development personnel, and other individuals committed to improving quality of life in the county. What actions can impact the fear of crime (in conjunction, of course, with actual safety strategies)? First, municipalities can conduct local surveys of perceptions of crime to identify the specific crime issues most of concern to residents, businesspeople, and visitors to the area. Next, steps can be taken to improve the local environment so that the “broken window” theory does not come into play. That theory states that if windows are broken and not repaired, it is an “invitation” to vandals to break more windows and then escalate their criminal behavior. If an area is filled with litter, people won’t be as concerned about leaving even more litter. Eventually that will attract a “bad element” of people. Thus some ways to reduce crime (and

fear of crime) include improving the environment by keeping the area clean and neat, improving street lighting, increasing patrols of neighborhoods, etc. A third recommendation for reducing fear of crime is involving the community in crime reduction and implementing a communication plan for keeping residents informed about the issues.⁹

The next section of the report will address the relationship between fear of crime (as well as other variables) and respondents' ratings of the county as a place to live.

Overall Ratings of the County as a Place To Live

OVERVIEW: *Nearly two-thirds of residents rated San Bernardino County as a “very good” or “fairly good” place to live. Ratings of the county are strongly related to residents’ perceptions of the county’s economy as well as their level of fear of crime. Residents continued to cite “good area/ location/ scenery” as the most positive aspect of living in the county, and “crime/gang activity” as the most negative. Air quality has virtually dropped off the charts as a major negative of life in the county.*

Every five years, the US Census Bureau releases a report on migration within the US. The most recent report¹⁰ (February, 2014) shows that the largest migration in the country – nearly 42,000 people – was from Los Angeles County to San Bernardino County. Economists have hypothesized that the major reason for the relocation is that it is cheaper to buy a house in San Bernardino County than in LA. Further, people talk about the central part of the county as being a place that is “close to everything”....an hour from the mountains, an hour from the beach, and hour from the desert. Both of those issues have been mentioned in previous Annual Survey reports as positive factors about living in the County, and have helped to explain that fact that the majority of County residents have always rated the County as a “very good” or “fairly good” place to live.

This year’s rating of the county as a place to live was just slightly higher than last year’s rating. About two-thirds (66%) believe that the County is a “very good” or “fairly good” place to live (Question B3). This figure is an increase from 2013’s 62% (which was the lowest since the inception of the survey in 1997) and approximately equal to last year’s 65%. The number is trending in the right direction, but is still below pre-recession levels.

2015 Survey	No regional analysis conducted				66

In 2013 the evaluations were broadly based, with no significant differences noted based on age, ethnicity, income, or education. This year Hispanics rated the County as “very good” or “fairly good” in higher numbers than did non-Hispanics (71% of Hispanics vs. 66% of non-Hispanics). But other than that, the ratings of the county were relatively consistent by subgroup (age, income, or education)

There were, however, differences in evaluations based on the city of residence of the respondent. Again, conducting a city-specific analysis (but keeping in mind the caveats of conducting such an analysis with small sample sizes), it appears that Ontario and Rancho Cucamonga/Alta Loma residents gave the highest ratings of the County as a place to live and people in San Bernardino gave the lowest.

Table 10.
% Rating the County as a “Very Good” or
“Fairly Good” Place to Live

Ontario	81%
Rancho Cucamonga/Alta Loma	80%
Chino	73%
Hesperia	71%
Rialto	71%
Victorville	70%
Fontana	62%
San Bernardino (<i>city</i> , not county)	40%

Other than ethnicity and geography, what factors explain people’s ratings of the county as a place to live? As in previous years, we found that there is a relationship between ratings of the county and fear of crime. Specifically, among those who are very fearful of being the victim of a serious crime, only 9% rate the county as a very good place to live, and another 32% said it is fairly good. On the other end of the spectrum, 32% of those who are not at all fearful rated the county as a very good place to live, and another 39% rated it as fairly good.

Table 11. Relationship Between Rating of the County as a Place to Live
and Fear of Crime

		How fearful are you that you will be the victim of a serious crime, such as a violent or costly crime?			
		Very fearful	Somewhat fearful	Not too fearful	Not at all fearful
Rating of the County as a Place to Live	Very good	9%	12%	20%	32%
	Fairly good	32%	51%	54%	39%
	Neither good nor bad	23%	24%	22%	23%
	Fairly bad	22%	10%	3%	4%
	Very bad	14%	3%	1%	2%
	TOTAL	100%	100%	100%	100%

* NOTE: Numbers in the table are *column percentages*

The economy tends to be another statistically significant factor in people’s ratings of their city or county as a place to live. As seen in the table below, 96% of those rating the county’s economy as “excellent” or “good” also rating the county as a “very” or “fairly” good place to live. In contrast, only 40% of those rating the county’s economy as “poor” said the county is a “very” or “fairly” good place to live.

Table 12. Relationship Between County Rating as a Place to Live and County's Economy

		How would you rate the economy in the county today?		
		Excellent or Good	Fair	Poor
Rating of the County as a Place to Live	Very good	40%	16%	7%

	Neither good nor bad	13%	20%	36%
	Fairly bad	1%	5%	16%
	Very bad	0%	1%	8%
	TOTAL %	100%	100%	100%

* NOTE: Numbers in the table are column percentages

A standard follow-up question to the one about ratings of the county as a place to live is an open-ended question asking specifically what respondents like or dislike about living in San Bernardino County. Over the years San Bernardino County residents consistently named “general area/location/scenery” as the thing they like best about living in the county (Table 13), followed by “climate/weather,” “affordable housing,” and “not crowded.”

Table 13. Positive Factors Mentioned About the County

	2005 %	2006 %	2007/08 %	2008/09 %	2010 %	2011 %	2012 %	2013 %	2014 %	2015 %
Good area, location, scenery	29	33	34	36	37	33	36	31	38	34
Good climate, weather	14	15	11	17	13	16	16	13	15	14
Affordable housing	10	11	11	5	9	8	8	9	8	12
Not crowded	8	8	8	8	7	7	7	6	5	6

In addition, 4% mentioned good schools/universities, 4% said something regarding feeling safe because of the low crime rate in the area, and 3% talked about the “friendly people.” Unfortunately, 3% also indicated that there is “nothing” they like about living in the county.

On the flip side, crime/gang activity was once again the most-often mentioned *negative* factor (32%) about living in the county (Table 14), with an additional 1% of respondents

mentioning the related issue of drugs. This figure has increased significantly in the past year, and that impression of crime as a negative factor most probably has an impact on various aspects of every-day life in the county. For example, concerns over crime may affect entrepreneurs’ willingness to open new businesses in the area, and concerned parents might move out of the area to provide a safer environment for their children.

Table 14. Negative Factors Mentioned About the County

	2005 %	2006 %	2007/08 %	2008/09 %	2010 %	2011 %	2012 %	2013 %	2014 %	2015 %
Crime, gang activity	24	33	24	31	26	22	27	29	25	32
Lack of job opportunities	3	1	3	5	7	8	7	8	7	7
Traffic	12	12	10	7	6	7	6	5	4	6
Smog, air pollution	10	8	9	9	8	6	5	3	4	3

In the 1970’s when someone mentioned “Inland Empire,” one of the first things people thought of was “smog,” and that perception was warranted at the time. But over the past three decades, the air quality has dramatically improved as shown in the graph below (number of days the city exceeded the maximum state 1-hour and 8-hour average ozone concentration).¹¹

of Days Exceeding Maximum State Ozone Concentration (1 hour standard and 8 hour standard)

11. Source: Air Resources Board

San Bernardino County residents appear to be noticing that improvement. For the past 3 years the percent of residents who cited “smog” as a negative factor was down below 5%. These figures are significantly below the 15% in 2001 who mentioned air quality as the most significant negative factor of life in the county.

In addition to the four “negatives” shown in Table 14 above, there were several items which didn’t have huge percentages of response individually, but in total reflected the fact that respondents are concerned about services provided by government and private organizations. For example, 3% mentioned a lack of entertainment/culture as the most negative factor of living in the county. Government officials are obviously not solely responsible for mitigating this negative factor, but they *can*, where possible, provide support for entrepreneurs seeking to open businesses that will improve the entertainment landscape. More directly under the control of government officials are the following responses:

- “Politics and City officials,” “corruption” (2%)
- “Homeless” (2%)
- “Poor public transportation” (2%)
- “Law enforcement, police” (2%)
- “City is dirty,” “City is not well maintained,” “graffiti” (1%)
- “Poor road and street maintenance” (1%)
- “Lack of sidewalks and street lights,” “Lack of public services” (1%)

Finally, it is noteworthy that 7% of respondents said that there is “*nothing*” they could name as the most negative thing about living in the county. Either that means that they love life in the region, or there are just too many things to mention thus they can’t name just one. In next year’s survey, this response will be probed to determine its meaning.

The reader is encouraged to view the appendix which shows the full list of items mentioned as the “one most negative thing” about living in the county.

Evaluations of Selected Private and Public Services

OVERVIEW: Libraries were rated the highest among all evaluated services, followed by ratings of police/sheriff, shopping, and parks and recreation. Street/road maintenance was rated lowest of the list of services for another year.

One of the factors contributing to a good (or not-so-good) quality of life is the availability of public and private services. Since 1999, respondents have been asked to rate a variety of public and private services (Questions B14 to B20). The following table details the last 16 years of data regarding the percentage of respondents who indicate that the services are “excellent” or “good.” The rating of libraries (a new question in 2012) was the highest of all services, with 80% of respondents rating libraries as “excellent” or “good.” In a digital era when some might be tempted to reduce this service as a cost-cutting measure, it is important to note that libraries continue to be an integral part of life in a city. Libraries aren’t just about books any more. Rather they include computer resources for those who can’t afford to buy a computer, thus helping unemployed people search for jobs and students needing to do research for class papers

Table 15. % of Respondents Rating Services as “Excellent” or “Good”

2015	80	65	64	63	54	48	50	31

and projects. Some libraries have story-telling programs for young children, programs which help to instill a love of reading in an era when video games and TVs are more prevalent in some

homes than books. Further, not everything is on the Internet, and not everything on the Internet is reliable! Indeed, a Pew Research Center survey¹² found that about half of all Americans ages 16 and older used a public library in some form in 2013, and 90% of Americans ages 16 and older said closing their local public library would seriously impact their community. Apparently San Bernardino County residents feel the same, based on the high rating of libraries.

As in previous years, respondents gave high ratings to police/sheriff (65%), an increase (although within the margin of error) from last year's 63%. Ratings of shopping and parks/recreation have also seen improvements, although again, those changes are within the margin of error.

The lowest ratings have traditionally belonged to street and road maintenance (31%), and there have been no signs of significant improvement over the years. Unfortunately the recession and strained City and County budgets have made it increasingly difficult to identify and fix the problems of aging streets and roads. Some municipalities have made good use of social media as a way for residents to report potholes (i.e. "tweeting potholes"¹³), broken streetlights and traffic signal issues, need for street sweeping, etc. Perhaps the rating will increase in future years as more residents are mobilized to help identify the problems as they arise.

It is important that city leaders are aware of the perceptions of street and road maintenance so that more attention can be paid to problem areas (again, consistent with budget realities). As noted earlier in this report, the sample sizes for some cities are quite low thus city-specific figures should be taken as general indicators only. However it appears that Rancho Cucamonga/Alta Loma is doing the best with street and road maintenance, whereas city leaders in San Bernardino, Rialto, and Hesperia may wish to focus more of its attention and priority on the issue, especially since it has been shown that investing in the maintenance of streets before they reach poor condition results in lower long-term costs for the city and enhances the economic development of the area.

Commuting

OVERVIEW: Since 1997, most respondents have reported that their commute time is less than one hour. Median commute time is the highest it has been since the inception of this survey. Most respondents report that they work in San Bernardino County, with Los Angeles County being the next destination of choice.

The U.S. Census collects a great deal of information regarding commuting characteristics of the county’s population, data which can be relied upon for a year or two after the Census is conducted. As time goes on, however, the less one can depend on Census data (especially considering the rapidly changing environment in a growing county such as San Bernardino). The American Community Survey provides estimates updating the Census, but not in as timely a fashion (and in as much detail) as the Inland Empire Annual Survey. For example, the most current data available from the American Community Survey is for 2011, whereas the information from this Inland Empire Annual Survey reflects 2015 figures.

At this point in time (five years after the U.S. Census was conducted), the commuting data from the Inland Empire Annual Survey is relatively comparable to the figures from the Census and American Community Survey¹⁴. As noted in the table below, nearly 6 out of 10 working respondents to the Inland Empire Annual Survey (57%) report a round-trip commute

14. <http://factfinder.census.gov/> shows that 59.5% have round trip commutes of less than an hour

time of less than one hour (Question B25), but that figure is trending down (indicating that fewer people have short commutes). Table 17 also shows that the median commute time has increased to 41.4 minutes – the highest since the inception of the survey.

Table 17. % Total Round-Trip Commuting Times of Less Than 1 Hour and Median Commute Time

	East Valley %	West Valley %	Victor Valley %	Desert %	SB County %	Median Commute Time
1998 Survey	60	54	58	71	58	38.2 min
1999 Survey	67	56	59	72	62	37.3 min
2000 Survey	68	59	43	76	61	37.1 min
2001 Survey	68	57	58	72	61	38.5 min
2002 Survey	60		54	68	60	36.6 min
2003 Survey	67	61	56	76	63	37.4 min
2004 Survey	62	63	52	71	62	36.0 min
2005 Survey	63	56	52	69	59	38.2 min
2006 Survey	62	63	58	72	62	38.4 min
2007 / 08 Survey	63	61	50	70	61	40.2 min
2008 / 09 Survey	63	55	53	64	58	40.0 min
2010 Survey	66	56	59	74	61	39.1 min
2011 Survey	61	63	53	66	61	39.7 min
2012 Survey	67	58	58	59	61	38.8 min
2013 Survey	No regional analysis conducted				60	37.0 min
2014 Survey	No regional analysis conducted				58	39.7 min
2015 Survey	No regional analysis conducted				57	41.4 min

Further, the *mean* (as opposed to the *median*) round trip travel time is 65.8 minutes (up from 60.4 minutes last year).¹⁵ And it is worth noting that 20% percent of respondents who work outside the home have round trip commutes of two or more hours (a figure which is virtually unchanged from last year). As the decade progresses, the Inland Empire Annual Survey should be more and more useful to decision makers as the most accurate and current data available.

Having a 41.4 minute median round trip commute time (up from 39.7 minutes last year) is not an overwhelming amount of time, especially since most working respondents (57%) travel less than an hour round trip each day. Further, the average distance travelled decreased from 44.03 miles to 38.32 miles round trip. That means it took *longer* to travel *fewer* miles.

15. The reader should note that the median is a better measure of commute time than the mean since the median is not skewed by a few excessively high commute times as is the mean. However other secondary data sources quote the mean, thus it is presented here for comparative purposes.

The Inland Empire's clogged highways and roads are taking a toll on people's wallets. Consider the following admittedly simplistic analysis of the cost of driving based on miles driven and time spent.

- The mean round trip mileage for our respondents was 38.32 miles. Assuming the 2014 IRS cost per mile of \$.56, the daily commute cost is \$21.46. A person who works 50 weeks a year, 5 days a week would be spending approximately **\$5,365** per year for direct driving and ownership costs of his/her commute.
- The mean round trip travel time was 65.83 minutes. Using the fourth quarter 2013 average hourly wage for San Bernardino County¹⁶ (approximately \$21), the value of a person's time spent commuting is approximately **\$5,760** for the 250 work days per year.

Based on this analysis, the combined total cost of commuting is a whopping **\$11,125** per year. Or conducting the same analysis using the more conservative figures of *median* mileage and travel time (23.33 miles, 41.4 minutes), the cost would be reduced to **\$6,889** per year...still a significant figure.

But as noted in our report last year, the cost of commuting goes beyond simple monetary costs. Recent research published in the *American Journal of Preventive Medicine* shows that the more time people spent driving to and from work, the greater the risk of cardiovascular disease, the risk of developing high blood sugar and high cholesterol, and the risk of depression and social isolation.¹⁷ And according to a recent study in *The Lancet* journal¹⁸, people who work more than 55 hours a week are 33% more likely to have a stroke. When longer hours are augmented by long and sometimes frustrating commutes, the potential for health risks are clear. When one looks at health risks along with the diminished quality of life due to having less time with family and friends, less time to sleep, etc., it is clear that commuting takes a major toll on people's lives.

What are the solutions? There are several options that San Bernardino County leaders have been focusing on, but clearly there is more to be done:

- Improving the transportation infrastructure significantly so that commute times are shortened;
- Increase efforts to bring jobs to the region;

16. Bureau of Labor Statistics, http://www.bls.gov/oes/current/oes_40140.htm#00-0000

17. [http://www.ajpmonline.org/article/S0749-3797\(12\)00167-5/abstract](http://www.ajpmonline.org/article/S0749-3797(12)00167-5/abstract)

- Work to encourage a culture change toward more “livable cities” where people can work in close proximity to their place of residence.

Another question on the survey (Question B27) asked working respondents: “What county do you work in?” Approximately 7 out of every 10 commuting respondents work within San Bernardino County (up from 66% last year), and another 2% work in several counties including San Bernardino.¹⁹ Los Angeles County is the next most popular commuting destination, with 16% of respondents travelling there to work. Based on the admittedly small sample sizes within individual cities, the outflow to Los Angeles County was primarily among those living in the West Valley (e.g. Chino, Ontario, Fontana, and Rancho Cucamonga).

Table 18. San Bernardino County Respondents’ Commuting Destinations

2015 Survey	70	7	4	16

* NOTE: A small percentage of respondents reported working in areas not listed in the table

Who are the people who need/want to leave the county to work? Those who commute to Los Angeles County include educators (11%), people in the medical field (9%), people in the

19. Again, these figures are relatively consistent with the 2012 American Community Survey which indicated that 69.6% of San Bernardino County residents worked in their county of residence.

computer industry (9%), managers (8%), electricians (4%) and many other professionals who arguably would prefer staying in the county (and avoiding a long commute) if well-paying jobs existed near their homes. The profile for those who travel to Riverside County is similar.

Some readers may recall that the 2007 Inland Empire Annual Survey showed that about a third of full-time workers would be willing to accept a 5% or 10% decrease in salary to work locally and eliminate their daily commute. A more recent study (2011) by the Telework Coalition said that more than one-third of technology professionals said they'd cut their salary by up to 10% if they could telecommute full time, and they are willing to sacrifice \$7,800 on average to work from home).²⁰ There is no reason to believe that this finding has changed significantly over time. As we've argued in past years, one of the best ways to solve the problem of traffic congestion and improve workers' quality of life is to promote enough economic growth in the area so that people don't have to commute to other areas for work. We still believe that this is imperative for the region, as do economic development agencies as well as organizations such as SANBAG who deal with transportation issues.

Confidence In Elected Officials

OVERVIEW: Confidence in elected officials hasn't budged. A majority of respondents report having a "great deal" or "some" confidence in their elected officials.

Part of the County's vision statement is that "We envision a model community which is governed in an open and ethical manner." There are many committed elected officials at the County and City levels who are putting forth incredible energy trying to improve the quality of life for residents throughout the county. Unfortunately, however, San Bernardino County has also seen its share of political corruption cases, attempted recalls of elected city leaders, and other "political theater" in recent years.

The public expects elected officials to make the hard policy decisions regarding the negatives of life in the region which, according to this survey, include crime/gang activity, the lack of job opportunities, traffic, and smog/air pollution. Over time, it appears that residents do have at least some confidence that the elected officials in their City or community will adopt policies that will benefit the general community. This year 58% of respondents indicated that

20. <http://www.telcoa.org.php5-17.dfw1-1.websitetestlink.com/wp-content/uploads/2011/05/Dice-Telework-Report-April-2011.pdf>

they have “a great deal of confidence” or “some confidence” in the officials, a figure which is significantly higher than the 2010 figure (51%) which reflected a survey conducted right around the time period when the much-publicized Colonies Crossroads case came to light. The 2010 evaluation was the low point of the survey. The confidence ratings for 2011 through 2015 are higher, but are still below national stats such as a national Gallup poll in September of 2014 which indicated that 72% of the public has a “great deal” or a “fair amount” of trust in their local government when it comes to handling local problems.²¹ Hopefully the Inland Empire ratings will improve as local government officials tackle the difficult issues of the day.

2010 Survey	46	59	39	45	51
2011 Survey	54	68	50	45	58
2012 Survey	49	66	43	45	55
2013 Survey	No regional analysis conducted				57
2014 Survey	No regional analysis conducted				57
2015 Survey	No regional analysis conducted				58

An analysis of these results by various demographic variables showed that there is remarkable consistency in confidence ratings among subgroups by education, ethnicity, age group, longevity in the county, income, and home ownership. Further, there are minimal differences in ratings by voters and non-voters and between Democrats and Republicans.

21. <http://www.gallup.com/poll/5392/trust-government.aspx>

There was, however, a striking relationship of overall rating of the county as a place to live with level of confidence in elected officials. Specifically, 66% of those who rated the county as a “very good” or “fairly good” place to live also said they had a “great deal” or “some” confidence in their elected officials; whereas only 30% of those who rated the county as a “very bad” or “fairly bad” place to live expressed a at least some level of confidence in their elected officials.

The same trend holds between ratings of the county’s economy and confidence in officials (74% of those rating the county’s economy as “excellent” or “good” had a “great deal” or “some” confidence in their elected officials, as opposed to 38% of those who rated the county’s economy as “poor”). It is difficult to know if any causality exists, however it does appear that confidence in elected officials is one significant factor in people’s overall “sense” of their county as a place to live and thrive.

Finally, we investigated whether there was a link between fear of crime and evaluation of elected officials. We found one. A bit over half (52%) of those who are “very” or “somewhat fearful” of being the victim of a serious crime had at least some confidence in their elected officials, as opposed to 61% of those who are not at all fearful.

FINAL NOTE

In this report we have presented overall findings from the 2015 Inland Empire Annual Survey. We have always believed that comparisons of regions within the county are important

for government organizations and businesses alike, however we have not had a sponsor request those analyses for the past three years. We hope that in the future such analysis can be conducted to add to better evaluate key public and private sector services and activities, and provide a regional focus for the key local issues.

The reader is encouraged to review the full data displays (attached) for detailed survey results. This report will be added to previous Annual Surveys on our website (http://iar.csusb.edu/reports/ie_annual_survey.html) for those who wish to view previous years' reports. For questions about the Inland Empire Annual Survey (or additional analysis tailored to a particular organization or agency), please contact Dr. Barbara Sirotnik at 909-537-5729.
