

Finding of Consistency

Project Title:

College of Arts and Letters/Theater Building Renovation and Addition

Project Location – Specific:

California State University, San Bernardino

Project Location – City and County:

City of San Bernardino, County of San Bernardino

Description of Nature, Purpose and Beneficiaries of the Project:

The Campus Master Plan/EIR was approved by the Board of Trustees in September 2017. The adopted Campus Master Plan for California State University, San Bernardino includes a proposed Performing Arts Building Addition (Building #20A) to be sited on the southern and western portion of the existing Performing Arts Building (Building #20). The Campus Master Plan/EIR assessed the impacts of this near-term project with an approximately 105,000 gross square foot expansion of the existing Performing Arts Building to include a theater stage with up to 1,200 seats for spectators, a public lobby, classrooms, and other academics spaces such as an interdisciplinary lecture classroom, a dance studio, and a theatre arts teaching lab.

The College of Arts and Letters/Theatre Building Renovation and Addition as currently designed will include a total of 90,300 GSF in new building addition (a 71,700 GSF 500-seat theatre addition on the southern portion of the site and a 18,600 GSF instructional/office building expansion on the western portion of the site that will be set back from, yet integrated, with the existing building) and approximately 12,200 GSF of renovation in the existing Performing Arts building. A College of Arts and Letters Phase 2 building addition of approximately 27,000 GSF is also planned for future development but will not be a part of this project. The proposed reconfigured buildings are within the sites identified in the Campus Master Plan/EIR.

There have been no substantial changes to the project scope or circumstances in the EIR. The project is a near-term project as identified in the EIR and any potential significant impacts have been considered. Mitigation Monitoring and Reporting Program addresses archaeological, cultural resources, and short-term construction traffic effects. The above-described project elements do not involve an environmentally sensitive area, nor does it change or expand the proposed uses, increase intensity, or result in a change from the proposed general campus location.

Name of Public Agency Approving the Project:

The Board of Trustees of the California State University

Name of Persons or Agency Carrying Out the Project:

California State University, San Bernardino

Leatha Elsdon, Director of Facilities Planning, Design and Construction

The project is within scope of the adopted Campus Master Plan, which was the subject of an environmental evaluation in the Board-certified Campus Master Plan Program Environmental Impact Report (EIR). The certified EIR was completed in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines. Further, the certified EIR remains pertinent and continues to have strong informational value. The above-described project has been evaluated under CEQA to determine whether the project scope, circumstances, or information would trigger the need for any supplemental environmental documentation based on new or substantially more severe significant environmental impacts. After a thorough factual evaluation, California State University, San Bernardino has determined that no further supplemental environmental review is required because:

- (1) The project does not propose substantial changes to the original project as described in the Campus Master Plan EIR, which would require major revisions to the previously-certified EIR due to the involvement of new or substantially more severe significant impacts;
- (2) The project will not involve substantial changes with respect to the circumstances under which the original project was undertaken, which would require major revisions to the previously-certified EIR due to the involvement of new or substantially more severe significant impacts; and
- (3) No substantially important new information requiring new analysis of significant effects, mitigation, or alternatives is known that would require major revisions to the previously-certified EIR due to the project scope.

The Board of Trustees of the California State University finds that no further environmental documentation is required because all potentially significant effects (a) have been analyzed adequately in the previously-certified EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to the previously-certified EIR. Therefore, in accordance with CEQA and the CEQA Guidelines (Section 15168(c)), the project elements are within the scope of the previously-certified EIR; that EIR continues to be pertinent with considerable information value; and project elements do not give rise to any new or substantially more severe significant effects, nor do they require any new mitigation measures or alternatives. Accordingly, no new environmental document is required.
