Philosophy

Through Philosophy one may think about and develop perspectives on topics as diverse as god, science, language, logic, truth, ethics, politics and law. Thus philosophy’s range of application is particularly broad. Typically, philosophy leaves aside the doing of religion, science and so forth, and asks fundamental questions about the nature and justification for the various perspectives.

Questions you might encounter in a philosophy class: What is the nature of the mind? Is it identical with the brain? Does God exist? If so, what is God like? Can we prove such a being exists? What makes an action right or wrong? What makes a society a just one? What distinguishes science from non-science? What is a scientific theory? Are numerals (like '4') names for objects? If so, what are these objects (presumably numbers) like? What is knowledge? Under what conditions do you have it?

CAREER OPTIONS
Philosophy focuses on clear thinking, analytical writing, and critical evaluation of complex ideas. Thus it is excellent training for anyone whose job requires broad perspectives and new and creative ideas. Philosophy is excellent preparation for a career in law, business, government, journalism and a wide variety of professional areas; and it is excellent preparation for different sorts of graduate and professional study. Philosophy does not provide training in specific job tasks, rather it focuses on basic skills that prepare you for the more challenging tasks they will encounter as your career advances.

EMPLOYMENT AND SALARY OUTLOOK
As indicated on the reverse, earnings for philosophy majors compare favorably to earnings from other disciplines. Philosophy is excellent preparation for graduate school, and philosophy majors do especially well on standardized tests required for graduate admission. This includes medical school, business school (with the GMAT exam), law school (with the LSAT exam) and other forms of graduate study (with the GRE exam).
