December 8, 2021

Time

4:00- 5:00

Location

Jack Brown Hall, room 358

Title

Wordpress and AWS, A
Convenient Pipeline With Power

Student

David Castellanos

Advisor

Bilal Khan

Abstract

As a Web developer, managing all the different services that come in the backend becomes cumbersome. Although it is sometimes necessary manage the services oneself, AWS provides unmatched performance and streamlines the process all within a secure and intuitive environment. The next question is now having an app to utilize the services. Wordpress is a speedy content manager that pushes out websites with ease. Some clients can have their needs fully met with Wordpress then have the scaling, security, and maintenance ease of AWS. As a 2D/3D designer myself, I want to show how this workflow can help others like it helps me.
