Title

Flutter App

Student

Armando Xochitiotzi

Advisor

Professor Fadi Muheidat

Abstract

My goal of the independent study was to learn how to use flutter and dart. Then later on to implement into to making an app. This app was going to show the basics and the advances of the uses of flutter and dart. The reason I chose to learn flutter and dart was to learn a new language then later on show my journey to my advisor for he can later maybe teach this same lesson. My goal in life was to get a job in app development so this was perfect to learn a new skill on how to make an app for I can

take these skills to get a job after school. The way I learned flutter and darts basics was just looking up YouTube videos of the basics and how to implement code in different ways. Overall, it was great experience to learn flutter and dart.
