1   # Chapter 9

2   # Access and Equity

3

4   **Introduction**

5   Among the core principles that guided the development of this framework is that

6   *schooling must help all students achieve their highest potential.* (See Chapter 1.)

7   To accomplish this, students must be provided equitable access to all areas of the

8   curriculum, appropriate high-quality instruction that addresses their needs and

9   maximally advances their skills and knowledge, and settings that are physically and

10   psychologically safe, respectful, and intellectually stimulating. All students must be

11   supported to achieve the goals indicated in the outer ring in Figure 9.1 below. (See

12   Chapters 1-3.)

13   Figure 9.1. Goals, Themes, and Contexts for Implementation of the CA CCSS for

14   ELA/Literacy and the CA ELD Standards
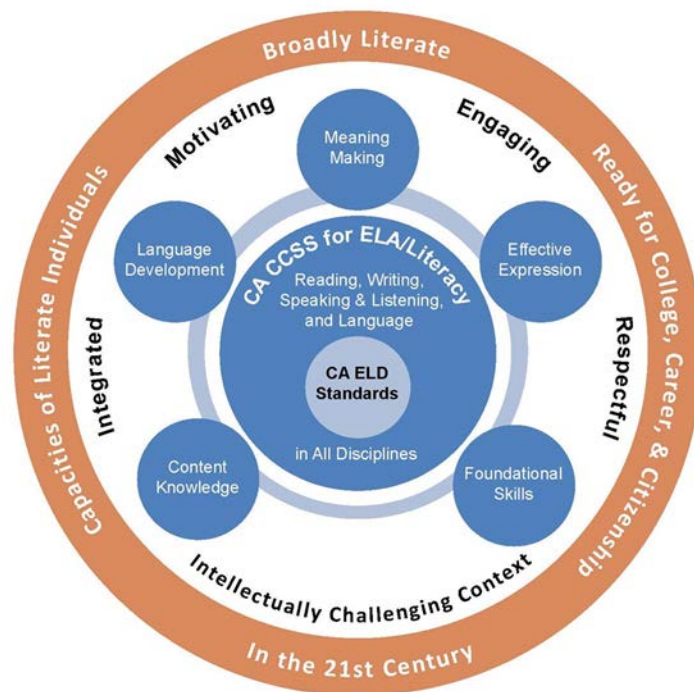

15

16   The United States Department of Education's Strategic Plan for Fiscal Years

17   2011-2014 highlights the need to strive for equity in U.S. schools:

18   All students—regardless of circumstance—deserve a world-class education. To

19   ensure that America regains its status as the best-educated, most competitive

20   workforce in the world with the highest proportion of college graduates of any

21   country, we must close the pervasive achievement and attainment gaps that exist

22   throughout the nation. Yet, far too often, the quality of a child's education and

23   learning environment, and opportunities to succeed are determined by his or her

24   race, ethnicity, national origin, age, sex, sexual orientation, gender identity,

25   disability, language, socioeconomic status, and/or ZIP code…Moreover, too

26   many students feel unsafe or unwelcome at school because they are (or are

27   perceived as) different from other students. All students should have an equal

28   opportunity to learn and excel in a safe and supportive environment. Because

29   inequities at all levels of education still exist, educational equity is the ***civil rights***

30   ***issue of our generation.*** (39-40).

31   The state of California recognizes its deep responsibility to ensure that each and

32 every child and adolescent receives a world-class 21st century education, one that

33 supports their achievement of their highest potential. In order to accomplish this goal, it

34 is important to acknowledge that inequities exist in current educational systems. Some

35 students have limited access to well prepared teachers and other educational

36 resources, there are persistent academic achievement gaps between minorities and

37 white students and between rich and poor children, and some groups of students

38 experience a low level of safety and acceptance in school depending on their cultural,

39 ethnic, and linguistic background; sexual orientation; poverty level; disability; and other

40 factors. Recognizing the specific inequities that exist helps educators and communities

41 to purposefully and strategically take action and strive for true educational equity for all

42 learners.

43   This chapter is divided into three major sections. The first section provides

44 information about California's diverse population and includes recommendations for

45 attending to specific educational needs. The second major section discusses planning

46 for meeting the needs of diverse learners at the classroom and school/district level. The

47 final section offers research-based instructional practices for supporting students who

48 are experiencing difficulty reading.

49 **California's Diversity**

50   California's students demonstrate a wide variety of skills, abilities, and interests

51 as well as varying proficiency in English and other languages. They come from diverse

52 cultural, linguistic, ethnic, and religious backgrounds, have different experiences, and

53 live in different familial and socioeconomic circumstances. The greater the variation of

54 the student population, the richer the learning experiences for all and the more assets

55 upon which teachers may draw. At the same time, the more complex becomes the

56 teacher's role in providing high-quality curriculum and instruction that is sensitive to the

57 needs of individuals. In such complex settings, the notion of ***shared responsibility is***

58 ***particularly crucial***. Teachers must have the support of one another, administrators,

59 specialists, and the community in order to best serve all students.

60   Several populations of learners are discussed in this section. With over sixty

61 languages other than English spoken by California's students, the rich tapestry of

62   cultural, ethnic, and religious heritages students enjoy, and the range of skill acquisition,

63   physical abilities and circumstances that impact students' lives and learning, it is beyond

64   the scope of this framework to discuss all aspects of California's diverse student

65   population. Highlighted are some groups of students for whom it is especially important

66   to acknowledge and value the resources they bring to school. These groups are also

67   addressed to recognize the need for schools to make necessary shifts to ensure

68   achievement by providing educational access and equity for all students. Though

69   presented separately, *these populations are not mutually exclusive*; some students

70   are members of multiple groups. Furthermore, it is important that, while teachers inform

71   themselves about particular aspects of their students' backgrounds, *each population is*

72   *a heterogeneous group*. Therefore, teachers must know their students as *individuals*.

73   **Standard English Learners**

74   Standard English learners (SELs) are native speakers of English who are ethnic

75   minority students (e.g., African-American, Native American, Southeast Asian-American,

76   Mexican-American, Native Pacific Islander) *and* whose mastery of the "standard English

77   language" that is privileged in schools is limited because they use an ethnic-specific

78   dialect of English in their homes and communities and use standard English (SE) in

79   limited ways in those communities (LeMoine 1999; Okoye-Johnson 2011). From a

80   linguistic perspective, the ethnic-specific dialects of English that SELs from different

81   communities use is equally legitimate as—and not subordinate to—standard English.

82   Therefore, the dialects of English that SELs use should not be viewed as "improper" or

83   "incorrect" English, and teachers should acknowledge them as valid and valuable

84   varieties of English useful for interacting with home communities, as well as in the

85   classroom.

86   Multiple studies have demonstrated that not all ways of using English are equally

87   valued in school (Heath 1986; Michaels 1986; Williams 1999; Zentella 1997). Learning

88   to use a language involves acquiring the social and cultural norms, procedures for

89   interpretation, and forms of reasoning particular to discourse communities (Watson-

90   Gegeo 1988). Because there are differences between the varieties of English that SELs

91   use in their home communities and SE, SELs may experience difficulties in successfully

92   participating in school if their teachers do not actively support them to develop SE, and

93   more specifically, academic English.

94   Teachers have particular and often unconscious expectations about how children

95   should structure their oral language and these expectations are not always transparent

96   to students (Michaels 1986). As Schleppegrell (2012, 412) notes:

97   This is a complex problem, because teachers are often not aware of their implicit

98   expectations for the ways children will use language in a particular context; they

99   may judge a child as disorganized or unable to engage in a task effectively when

100   instead the issue is a difference in what the child and teacher recognize the task

101   to be or in how the child and teacher expect the task to be accomplished through

102   language.

103   The expectations for language use in school are often subtle. In a study focusing

104   on language use by different socio-economic groups, Williams (1999) found that,

105   although both working class and middle class parents in the study read to their children

106   in highly interactive ways in an effort to prepare them for schooling, the nuanced ways

107   in which these two groups interacted through language around the texts favored middle

108   class families because those nuances, such as prompting for elaboration, matched

109   school interactions around texts. Williams argues that teachers should both value the

110   language students bring with them to school and also make the linguistic features of

111   school language, or SE, explicit to students in order to provide them with extended

112   linguistic resources they can draw upon, depending upon the social context in which

113   they find themselves (Spycher 2007).

114   The next section focuses specifically on one of many dialects of English used by

115   SELs, African American English (AAE). Although AAE speakers are highlighted here,

116   recommendations for how teachers should perceive language diversity and approach

117   the learning of SE apply to all groups of SELs.

118   ***African American English (AAE) Speakers***

119   Some African Americans speak African American English (AAE), also termed

120   African-American Vernacular English (AAVE), African American language, Black

121   English Vernacular, Black Language, Black Dialect, or U.S. Ebonics (Chisholm and

122   Godley 2011; Perry and Delpit 1998). Like all other natural linguistic systems, AAE is

123 governed by consistent linguistic rules and has evolved in particular ways based on

124 historical and cultural factors. AAE is fully capable of serving all of the intellectual and

125 social needs of its speakers (Trumbull and Pacheco 2005). In their review of the

126 research on AAE, Trumbull and Pacheco (2005, 38) report:

127   Black Language has multiple forms—oral and written, formal and informal,

128   vernacular and literary (Perry, 1998). Its forms and uses derive from its heritage

129   of West African and Niger-Congo languages (Nichols, 1981; O'Neil, 1998). Black

130   Language has been influenced not only by African languages but also by the

131   social circumstances surrounding the histories of African-Americans in the United

132   States. Words and phrases have been coined in order to keep some things

133   private from the dominant white culture (particularly during the time of slavery).

134   For example, railroad terms were used in reference to the Underground Railroad,

135   the system that helped runaway slaves to freedom: Conductor referred to a

136   person who helped the slave and station to a safe hiding place (World Book

137   Online, 2003). The oratorical devices (e.g., rhythm, rhyme, metaphor, repetition)

138   used by African American preachers are distinctive elements of Black Language

139   (Perry, 1998). Many discourse conventions distinguish Black Language, including

140   particular structures for storytelling or narrative writing (Ball, 1997; Heath, 1983;

141   Michaels & Cazden, 1986) or argumentation (Kochman, 1989).

142   AAE has erroneously been considered by some teachers as ungrammatical or

143 illogical, which has perhaps led some of these teachers to view their students who use

144 AAE as less capable than SE speakers (Chisholm and Godley 2011). These

145 assumptions, often unconscious, are unfounded since linguists have shown that all

146 languages have different dialects that are logical and grammatical (Labov 1972;

147 Wolfram, Adger, and Christian 2007). While these assumptions are clearly unfounded,

148 they are no less damaging to students (Flemister-White 2009).

149   Delpit (Goldstein, 2012) has questioned research that fails to recognize cultural

150 and dialect differences and that positions low-income African-American children as

151 having a "language deficit." Some literacy research, for example, has suggested that

152 low-income African-American children have smaller vocabularies than children from

153 higher socio-economic backgrounds. However, these differences in the ways different

154   cultural and ethnic groups use language may be unfamiliar and invisible to teachers.

155   Delpit points out that many preschool low-income African-American children may know

156   terms that are different from those SE terms valued in school and therefore may be

157   unfamiliar to many teachers and language researchers. Delpit contends that, "(g)ranted,

158   they may not be words that would be validated in school, but it may be the case that

159   children's vocabularies are greater than we anticipate … The problem is that it is not

160   viewed as intelligent but as evidence of deprivation. It should be looked at as the

161   intelligence of a child learning from his or her environment in the same way a child from

162   a college-educated family would" (ibid).

163   Delpit also signals to teachers that overcorrecting AAE speakers' dialect-

164   influenced pronunciation and grammar while students are reading aloud (e.g.,

165   "Yesterday, I wash my bruvver close") inhibits reading development in multiple ways,

166   not least of which is that it "blocks children's understanding that reading is essentially a

167   meaning-making process" and leads children to think that reading is about

168   pronunciation and not comprehension (Delpit 2006, p 59). Instead of viewing AAE as

169   subordinate or inferior to SE, a more accurate perspective and productive approach

170   would be to view AAE as a cultural and linguistic resource, and like all cultural and

171   linguistic resources, AAE is intimately linked to group identity, empowerment, and

172   positive self-image. This is not to say that teachers should never correct pronunciation

173   or teach students about SE, rather correction should be used judiciously, purposefully,

174   and respectfully.

175   Research has shown that pedagogical approaches that support students to

176   become "bidialectal," or proficient users of both SE and AAE, are those practices that

177   both explicitly acknowledge the value and linguistic features of AAE, build on students'

178   knowledge of AAE to improve their learning opportunities, and also ensure students

179   have the linguistic resources necessary to meet the expectations of school contexts

180   (Chisholm and Godley 2011; Delpit 1995; Hill 2009; Thompson 2000). These

181   approaches to raising dialect awareness include attention to positive and negative

182   stereotypes associated with the use of SE and AAE, identity, and power. As Chisholm

183   and Godley (2011, 434) explain, three combined approaches enhance students'

184   knowledge about language variation:

185   1. Teaching explicitly about widespread dialects in the United States or within

186   students' communities;

187   2. Holding student-centered discussions about the relationship among language,

188   power, and language ideologies; and

189   3. Asking students to research language use in their own lives.

190   In their review of the research on these approaches, Chisholm and Godley

191 (2011) demonstrate that instructional approaches that problematize widespread beliefs

192 about language variation and that encourage students to critique these beliefs, as well

193 as research their own language use, promotes substantial student learning about

194 dialects, identity, and power. They suggest that "teachers and students often do not

195 question linguistically erroneous yet publicly taken-for-granted beliefs about language

196 and dialects unless language instruction explicitly guides them to do so" (435).

197   **English Learners**

198   Students who are learning English as an additional language come to California

199 schools from all over the world, and many were born in California. English learners

200 (ELs) come to school with a range of cultural and linguistic backgrounds, experiences

201 with formal schooling, proficiency with native language and English literacy, migrant

202 statuses, and socioeconomic statuses, as well as their interactions in the home, school,

203 and community. All of these factors inform how educators support ELs to achieve

204 school success through the implementation of the CA ELD Standards in tandem with

205 the CA CCSS for ELA/Literacy and other content standards. Some of the key factors

206 teachers should consider include:

207   • **Age:** It is important to note how ELs learn the English language at different

208   stages of their cognitive development. Most notably, it is important to distinguish

209   between students in the primary grades, who are learning how print works for the

210   first time while also engaging in challenging content learning, and students in the

211   intermediate and secondary grades, for whom the focus is on increasingly

212   rigorous disciplinary content and complex literary and informational texts. ELs

213   entering U.S. schools in kindergarten, for example, will benefit from participating

214   in the same instructional activities in literacy as their non-EL peers, along with

215   additional differentiated support based on student needs. ELs who enter U.S.

216   schools for the first time in high school, depending upon the level and extent of

217   previous schooling they have received, may need additional support mastering

218   certain linguistic and cognitive skills in order to fully engage in intellectually

219   challenging academic tasks. Regardless of their schooling background and

220   exposure to English, all ELs should have full access to the same high quality,

221   intellectually challenging, and content rich instruction and instructional materials

222   as their non-EL peers, along with appropriate levels of scaffolding to ensure

223   success.

224   • **Primary language and literacy background:** ELs have varying levels of

225   knowledge, skills, and abilities in primary language and literacy. Older ELs may

226   also have considerable content knowledge in core disciplines, such as science or

227   math. Many ELs continue to develop primary language and literacy in both formal

228   bilingual programs or less formally at home. ELs can draw upon their primary

229   language and literacy skills and knowledge and also the content knowledge

230   they've developed in their primary language to inform their English language

231   learning and content knowledge development. Rather than leaving this cross-

232   linguistic "transfer" up to chance, teachers should approach transfer intentionally

233   and strategically. Other ELs may have very limited schooling backgrounds and

234   may have gaps in literacy skills (e.g., decoding, comprehension) and so will

235   require substantial support in particular aspects of literacy instruction. Even with

236   strong primary language foundations, however, some EL adolescents may

237   struggle to master disciplinary literacy, given the accelerated time frame in which

238   they are expected to meet grade-level content-area expectations.

239   • **Time in the U.S.:** Many ELs were born in the U.S. or began their US schooling

240   in kindergarten. ELs who were born in the U.S. or who have been in U.S. schools

241   for a number of years are fluent in conversational, or "everyday" English

242   (although there may be gaps in some ELs' knowledge of more everyday English),

243   and need to develop academic English in an accelerated manner. Other ELs

244   enter U.S. schools with limited exposure to American culture or to English.

245   Newcomer EL students, students who have been in U.S. schools for less than

246   one year, should be provided with specialized support to ensure their accelerated

247   development of English, as well as their social integration into their schools. For

248   older students who are newcomers to English, primary language assessments

249   should be used, when available, in order to determine an appropriate

250   instructional program. Especially important to note is that students with strong

251   backgrounds in formal schooling, those who may be performing at grade level in

252   their primary language but who are new to English, will require different

253   specialized instruction than students with less formal schooling.

254   • **Progress in ELD:** Regardless of their age, primary language and literacy

255   backgrounds, and time in U.S. schools, all ELs should make steady progress in

256   developing English, particularly the types of academic English needed for school

257   success. However, many ELs may have not received the educational support

258   from schooling that they need to continually progress in developing English and

259   for succeeding in academic subjects. These students have been identified as

260   "long-term English learners" (LTELs) because they have been schooled in the

261   U.S. for six or more years but have not made sufficient linguistic and academic

262   progress to meet reclassification criteria and exit EL status. (See Figure 9.1 for

263   the California Education Code definition of *long-term English learner.*) Fluent in

264   social/conversational English but challenged by academic literacy tasks, and

265   particularly disciplinary literacy tasks, LTELs find it difficult to engage

266   meaningfully in increasingly rigorous coursework. California recognizes that

267   LTELs face considerable challenges succeeding in school as the amount and

268   complexity of the academic texts they encounter rapidly increase. Special care

269   should be taken when designing instruction for LTELs, and instruction should

270   focus on accelerating the simultaneous development of academic English and

271   content knowledge in motivating and engaging ways in order to ensure that

272   LTELs are college and career ready.

273

274

275

276

277

278   Figure 9.2. California Education Code Definition of Long-term English Learner

2013 California Education Code 313.1. a & b defines a long-term English learner as "an English learner who is enrolled in any of grades 6 to 12, inclusive, has been enrolled in schools in the United States for more than six years, has remained at the same English language proficiency level for two or more consecutive years" as determined by the state's annual English language development test. In addition, the same California Education Code identifies English learners at risk of becoming long-term English learners as those EL students enrolled in any of grades 5 to 11, in schools in the United States for four years, and who score at the intermediate level or below on the state's annual English language development test the fourth year at the below basic or far below basic level on the English language arts standards-based achievement test.

279

280   A comprehensive internal accountability system, which includes both robust
281   formative assessment approaches and summative yearly assessments, is necessary for
282   ensuring that ELs and Reclassified English Proficient Students (see next section)
283   maintain a steady trajectory toward linguistic and academic proficiency and do not fall
284   behind as they progress into and through secondary schooling. It is critical that all
285   educators have detailed and current information on their students' yearly progress
286   toward English language proficiency and proficiency with the CA CCSS for
287   ELA/Literacy. This can only happen with clearly established benchmarks of expected
288   progress in English language proficiency and academic progress that are a function of
289   both the time in U.S. schools and students' English language proficiency (Hopkins,
290   Thompson, Linquanti, Hakuta, and August 2013). Monitoring the yearly progress of ELs
291   in this manner while also keeping a close eye on the type of ELD and content instruction
292   EL and RFEP students receive, makes it possible for educators to know who their EL
293   students are, determine how well their students are progressing linguistically and
294   academically, and make instructional adjustments in time to improve educational
295   outcomes. Specific guidance on responding to the intimately entwined academic and
296   linguistic needs of English learners is provided throughout this framework. For more
297   information on the stages of English language development as indicated by the CA ELD
298   Standards, see the discussion of Proficiency Level Descriptors in Chapters 2 and 3 of
299   this framework and the CDE publication of the CA ELD Standards.

300

301

302   ***Reclassified English Proficient Students***

303   Students who have reached "proficiency" in the English language benefit from

304   occasional linguistic support as they continue to build increasing breadth, depth, and

305   complexity in comprehending and communicating in English in a wide variety of

306   contexts. Districts are required to monitor students who are within their first two years of

307   reclassification from "English learner" status to "Reclassified Fluent English Proficient"

308   (RFEP) status two years after reclassification in order to ensure they are maintaining a

309   steady academic trajectory. When RFEP students experience difficulty engaging with

310   academic tasks and texts, schools should rapidly provide them with appropriate support,

311   which may include, but is not limited to, the following:

312   • Student/teacher/parent conference

313   • Specialized instruction during the school-day, based on multiple formative

314   assessment measures

315   • Extended learning opportunities (e.g., after school tutoring, zero-period classes).

316   ***Instructional Programs and Services for English Learners***

317   As indicated in Figure 9.3, California's ELs are enrolled in a variety of different

318   school and instructional settings that influence the application of the CA ELD Standards.

319   An EL student could be enrolled in a newcomer or intensive ELD program for most or all

320   of the day, a mainstream program where the student receives specialized ELD

321   instruction for part of the day (e.g., designated ELD time in elementary or an ELD class

322   in secondary), or a bilingual/dual-language program where instruction is provided in

323   both the primary language and English. The CA ELD Standards apply to all of these

324   settings and are designed to be used by all teachers of academic content and of ELD in

325   ways that are appropriate to the setting and identified student needs. For example, they

326   are the focal standards in settings specifically designed for English language

327   development—such as an ELD class where ELs are grouped by English language

328   proficiency level. Additionally, the CA ELD Standards are designed and intended to be

329   used *in tandem with* other academic content standards to support ELs in mainstream

330   academic content classrooms. These could include, for example, a third-grade self-

331   contained classroom during ELA, social studies, math, and science instruction; a middle

332   school math class; or high school science class, among others. When the CA ELD

333   Standards are used during content instruction in tandem with content standards, this is

334   termed Integrated ELD. When the CA ELD Standards are used as the focal standards

335   during a protected time during the instructional day, this is termed Designated ELD (see

336   Chapters 2 and 3 and the grade span chapters for additional information on Integrated

337   and Designated ELD instruction).

338   Whether EL students are enrolled in alternative bilingual or mainstream English

339   programs, all California educators have the dual obligation to provide EL students with

340   meaningful access to grade-level academic content via appropriate instruction and to

341   develop students' academic English language proficiency.

342

343   Figure 9.3. Instructional Characteristics in Programs for English Learners

Instructional Characteristics	Type of Program			
	Two-Way Immersion	Developmental Bilingual	Transitional Bilingual	Mainstream English-only
Language and Literacy Goals	Biliteracy in home language and English		Literacy in English and validation of home languages	
Typical Models	*Elementary:* Proportion of home language to English in instruction starts at 90/10 or 50/50 in Kindergarten to approximately 20/80 by fifth grade *Secondary:* Some content and home language (e.g., Spanish for Spanish speakers) coursework in home language	*Elementary and Secondary:* Proportion of home language to English varies with full transition to English varying depending on availability of the program at later grades	*Elementary:* Proportion of home language to English varies with full transition to English typically by the third or fourth grade	Mainstream English Structured English Immersion (SEI)

344

Instructional Characteristics		Type of Program			
		Two-Way Immersion	Developmental Bilingual	Transitional Bilingual	Mainstream English-only
Language of Instruction	Home Language	Literacy in the home language taught across the disciplines		Strategic use of home language	
	English	Literacy in English introduced sequentially or simultaneously			All content instruction in English
	English Language Development Instruction	Occurs daily Careful scope and sequence designed to ensure students can fluently decode and comprehend grade-level texts in English by the late elementary grades Includes Parts I and II of the ELD Standards May include instruction in foundational literacy skills (ELD Standards, Part III), where appropriate			Occurs daily Includes Parts I and II of the ELD Standards Part III of the ELD Standards is addressed during ELA (some students may need specialized attention during ELD)

345

346   **Biliterate Students**

347   In California, biliteracy is valued and the primary languages that ELs bring to

348   school are considered important resources, valuable in their own right and as a base

349   from which to develop English as an additional language. Also valued are the benefits to

350   native speakers of English in becoming bilingual and biliterate. While developmental

351   bilingual programs provide means for ELs to become biliterate in their native language

352   and English, two-way, or dual, immersion programs allow both ELs and native English

353   speakers to become biliterate in each other's languages.

354   ELs who are developing language and literacy in two languages simultaneously

355   in the elementary grades and all students in two-way immersion programs require a

356   carefully-designed scope and sequence that ensures steady progress in both

357   languages. This scope and sequence includes on-going formative assessment in both

358   languages and careful analysis of assessment feedback in order to inform instructional

359   decisions. Like all students, students in biliteracy programs must be well-prepared for

360   engaging with complex grade-level texts in English in the upper elementary grades and

361   through secondary schooling.

362   **Deaf Students Bilingual in ASL and Printed English**

363   All students have the right to instruction and assessment that is both linguistically

364   and culturally appropriate. Deaf community members who use American Sign Language

365   (ASL) view themselves as a cultural and linguistic minority, rather than individuals with a

366   disability (Ladd 2003). Although deaf and hard-of-hearing students constitute a small

367   percentage of California's school population, teachers must consider their unique visual

368   linguistic and learning needs when designing and providing instruction and assessment.

369   For example, the acquisition of written English cannot rely on letter-sound

370   correspondences for these students. Deaf and hard-of-hearing students whose primary

371   language is American Sign Language learn English as a second language. In this sense

372   they are similar in many ways to English learners who have a spoken primary language.

373   The linguistic outcome for Deaf and hard-of-hearing students in bilingual language

374   programs is to become proficient in both ASL and printed English.[1]

375   ASL is the signed language of deaf people in the United States. ASL is a natural

376   language, operating in the visual-gestural modalities rather than the audio-oral

377   modalities of spoken languages such as English, and has grammatical and expressive

378   properties equivalent to those in spoken natural languages. ASL developed through

379   interaction among deaf people in deaf communities across the United States. (Distinct

380   signed languages develop throughout the world anywhere communities of deaf people

381   communicate with each other using sign.) ASL literature and performance is recorded in

382   video. Fingerspelling is a key component of American Sign Language and provides a

383   linguistic link between ASL and English in that the handshapes are based on letters of

384   the English alphabet and can be used to spell out English words. However,

385   fingerspelling is also integrated into ASL vocabulary and grammar in more complex and

386   systematic ways (Baker 2010).

---

[1] Some deaf or hard-of-hearing students may be able to learn to understand and/or use some spoken English, depending on the level or type of residual hearing they have and at what age they lost their hearing. Deaf students can most easily learn spoken English after acquiring written English skills.

387   Deaf children of Deaf parents who use ASL acquire ASL as a native (primary)

388   language from birth. Research has shown that native users of American Sign Language

389   demonstrate higher proficiency levels in English than non-native users (Strong and

390   Prinz 1997). Children who are born to hearing parents may start learning ASL at a later

391   age. Many deaf students do not learn ASL until they enter school; because they are

392   learning what is in effect their primary language at a late age, they may also be delayed

393   in learning their second language, the written English language system. Schools with

394   bilingual language programs in ASL and English for Deaf students can facilitate the

395   development of both languages by building on ASL as the primary language, using it to

396   teach a broad range of subjects and to develop primary language knowledge and skills,

397   and using ASL to support the development of written English.

398   Deaf and hard of hearing students are educated throughout California in a variety

399   of settings. The type of primary language support provided varies with the setting. In

400   schools where students are placed in the mainstream classroom, primary language

401   support for Deaf and hard-of-hearing students who use ASL typically consists of

402   translating oral (speaking and listening[2]) classroom activities via an interpreter from

403   English into ASL and vice versa.

404   In bilingual programs for Deaf students, the language of instruction is ASL.

405   Students' primary language, along with printed English, is used throughout the day to

406   provide instructional content. Students view speeches and performances directly in their

407   primary language. When instructional materials are not available in ASL, captioning or

408   printed English is used. Students also give presentations and have discussions in their

409   primary language. Interpreters are not used in the classroom as all teachers are fluent

410   in American Sign Language, enabling direct instruction in the students' primary

411   language.

412   **Students Living in Poverty**

413   More than one in five of California's children and adolescents live in poverty (U.S.

414   Census Bureau 2012). Some students living in poverty are from families where parents

415   are working one or more jobs yet they are having difficulty surviving economically.

---

[2] As noted throughout this framework, speaking and listening should be broadly interpreted to include signing and viewing for Deaf and hard-of-hearing students whose primary language is American Sign Language (ASL).

416   Some have moved often with their families, changing schools every year or multiple

417   times each year, because of economic circumstances, including job loss. Some are

418   unaccompanied minors, some are living on the street or in shelters with their families,

419   some have stable housing but often go hungry. They are a heterogeneous group made

420   up of all ethnicities, but students of color are overrepresented in the population of

421   students in kindergarten through grade twelve living below the poverty line (U.S.

422   Department of Education 2013).

423   The challenges individuals living in poverty face are complex. The resources of

424   many agencies working in collaboration are required to mitigate the negative effects of

425   poverty. A broad interpretation of "shared responsibility," that is, one that includes

426   agencies beyond the public education system, is crucial in order to serve these

427   students.

428   Poverty is a risk factor for poor academic outcomes. In other words, children and

429   youth living in poverty are more likely than their peers to experience academic difficulty.

430   However, the effects poverty has on individuals vary based on "the individual's

431   characteristics (such as personality traits), specific life experience (such as loss of

432   housing), and contextual factors (such as neighborhood crime), as well as the stressor's

433   timing..." and the presence of protective factors, which includes affirming, positive, and

434   supportive relationships with teachers and schools (Moore 2013, 4). Thus, the

435   respectful, positive, and supportive schools called for throughout this chapter and the

436   entire framework—important for all students—are especially crucial for students living in

437   the psychologically and physically stressful circumstances that come with poverty.

438   Children and youth living in poverty often miss many days of school; some stop

439   attending altogether. Many transfer from one school to another as their living

440   circumstances dictate. As a result, there are often gaps in their education. Research

441   indicates that high residential mobility during the early years is related to poor initial

442   reading achievement and subsequent trajectories (Voight, Shinn, and Nation 2012). It is

443   essential that teachers and districts identify these students early and work with them to

444   determine and address their needs. Those children in this population who do

445   experience academic success in the early years are more likely to succeed in

446   subsequent years; early success in reading has been demonstrated to have particular

447   significance for this population (Herber, and others 2012).

448   Students living in poverty are more likely to struggle with engagement in school.

449   Jensen (2008) discussed seven areas of concern for low-income students and

450   recommended actions that teachers can take to mitigate their effects (summarized and

451   adapted in Figure 9.4). The issues cannot be addressed solely in the classroom. Other

452   resources must be harnessed to more fully address the needs of these students. (See

453   also Kaiser, Roberts and McLeod 2011 for a discussion of poverty and language

454   delays.)

455

456   Figure 9.4. Poverty and Classroom Engagement: Issues and Classroom Actions

457   (summarized and adapted from Jensen, 2008)

Issue	Action
Health and Nutrition Students living in poverty generally are in poorer health and have poorer nutrition than their middle-class peers. Poor health and nutrition affects attention, cognition, and behavior.	Ensure students have daily opportunities for physical activity and that they and their families are aware of free and reduced lunch programs and medical, including mental health, services offered in the community.
Academic Language Students living in poverty generally have limited experience with the kind of language highly valued in school—academic language—than their middle-class peers. Academic language includes general academic and domain-specific vocabulary, discourse practices, and understandings about how different text types are structured.	Attend to academic language development in all areas of the curriculum and in classroom routines. As noted throughout this framework, academic language, which includes vocabulary, is a crucial component of ELA/literacy programs and disciplinary learning (as well as all aspects of life and learning). Provide rich language models, prompt and extend responses, engage the student in discussions.
Effort Some students living in poverty may appear to lack effort at school. This might be due to lack of hope or optimism, depression, or learned helplessness.	Recognize the critical role that teachers and schools play in students' willingness to exert themselves academically. Strengthen relationships between the school and students.
Hope and the Growth Mind-Set Low socioeconomic status is related to low expectations and a vision of a negative future.	Ensure that students know that their futures and their abilities are not fixed. Provide high-quality feedback that is task-specific and actionable.

Issue	Action
	Support students' beliefs in their potential (not their limitations) and the rewards of effort.
Cognition Students living in poverty often demonstrate lower academic achievement than their middle-class peers. They may have lower attention spans and other cognitive difficulties. This may result in problem behavior or giving up.	Break content into smaller, manageable components. Ensure that all students receive a rich, engaging, and intellectually stimulating curriculum. Encourage students and provide positive feedback.
Relationships Students living in poverty face considerable adversity, often in the form of disruptive or stressful home relationships. They may become mistrustful or disrespectful; they may be impulsive and respond inappropriately at school.	Ensure that adults at school are positive, caring and respectful. Make expectations clear. Above all, treat students living in poverty, as well as their families, with dignity, and convey the attitude that all students are welcome and capable of achieving to the highest levels.
Distress Students living in poverty often live in acute chronic distress, which impacts brain development, academic success, and social competence. They may demonstrate aggressive and inappropriate behavior or exhibit passivity.	Recognize the cause of the behavior. Build positive and respectful relationships. Teach coping skills. Seek advice from other school or district professionals, when appropriate.

458

459   **Lesbian, Gay, Bisexual, and Transgender Students**

460   All California's children and adolescents have the fundamental right to be

461   respected and feel safe in their school environment, yet many do not because of their

462   sexual orientation or gender expression. Research indicates that kindergarten through

463   grade 6 students who are gender nonconforming are less likely than other students to

464   feel very safe at school and more likely to indicate that they sometimes do not want to

465   go to school because they feel unsafe or afraid. Furthermore, they are more likely to be

466   made fun of, called names, or bullied (GLSEN and Harris Interactive 2012). Lesbian,

467   gay, bisexual, and transgender (LGBT) students between the ages of 13 and 18 also

468   report feeling unsafe and experiencing harassment or assault at school. Like their

469   younger counterparts, they miss days of school to avoid a hostile climate. Notably,

470   students in middle school report higher frequencies of victimization than students in high

471   school (GLSEN 2012).

472   All California educators have a duty to protect students' right to physical and

473   psychological safety and ensure that each of their students has the opportunity to thrive.

474   The California *Education Code* (EC) Section 200 et seq. prohibits discrimination on the

475   basis of various protected groups, including sexual orientation, gender identity, and

476   gender expression. California recognizes that discrimination and harassment in schools

477   "can have a profound and prolonged adverse effect on students' ability to benefit from

478   public education and maximize their potential" (California Department of Education

479   2012). Furthermore, research suggests that victimization based on sexual orientation or

480   gender expression is related to lower academic achievement and educational

481   aspirations as well as poorer psychological well-being (GSLEN 2012).

482   General recommendations from the Gay, Lesbian, and Straight Education

483   Network (GLSEN 2012) for schools regarding students in this heterogeneous population

484   include the following:

485   • Adopt and implement clear policies and procedures that address bullying and

486   harassment for any reason, thus promoting respectful and safe environments for

487   all students

488   • Provide training to educators and ensure that all students have access to a

489   welcoming environment and supportive, respectful teachers and staff who will

490   intervene on their behalf

491   • Increase students' access to an inclusive curriculum (California Senate Bill 48

492   added language to *Education Code* Section 51204.5 prescribing the inclusion of

493   the contributions of lesbian, gay, bisexual, and transgender Americans to the

494   economic, political, and social development of California and the United States of

495   America, with particular emphasis on portraying the role of these groups in

496   contemporary society)

497   Additional recommendations include the following:

498   • Make available and share age-appropriate literature that reflects the diversity of

499   humankind and thoughtfully deals with the complexities and dynamics of

500   intolerance and discrimination

501   • Teach students by example and through discussion how to treat diverse others

502   California students who are not themselves in this population may have parents

503 or guardians who are lesbian, gay, bisexual, or transgender. All students and their

504 families need to feel safe, respected, and welcomed in school.

505   **Advanced Learners**

506   Advanced learners, for purposes of this framework, are students who

507 demonstrate or are capable of demonstrating performance in ELA/literacy at a level

508 significantly above the performance of their age group. They may include (1) students

509 formally identified by a school district as gifted and talented pursuant to California

510 *Education Code* Section 52200 and (2) other students who have not been formally

511 identified as gifted and talented but who demonstrate the capacity for advanced

512 performance in ELA/literacy. In California, each school district sets its own criteria for

513 identifying gifted and talented students.

514   The informal identification of students' learning needs (#2 above) is important

515 because some students, particularly California's culturally and linguistically diverse

516 learners, may not exhibit advanced learning characteristics in culturally or linguistically

517 congruent or familiar ways. For example, a kindergartener who enters U.S. schools as a

518 newcomer to English and is fluently translating for others by the end of the year may not

519 be formally identified as advanced but may in fact be best served by programs offered

520 to gifted and talented students. Likewise, students with disabilities may not be identified

521 as gifted and talented as readily as others by teachers, yet some students with

522 disabilities may be also gifted and talented. They are "twice exceptional" and instruction

523 must address both sets of needs (International Dyslexia Association 2013; Nicpon,

524 Allmon, Sieck, and Stinson 2011). Teachers must be prepared through preservice and

525 inservice professional learning programs to recognize the **range of learners** who are

526 gifted and talented. As noted previously, the populations discussed in this chapter are

527 not mutually exclusive and each is heterogeneous. A statement from National

528 Association for Gifted Children (NAGC) about the CCSS is provided in Figure 9.5.

529   Figure 9.5. The NAGC's Statement on the CCSS and Gifted Education

Application of the Common Core State Standards for Gifted and Talented Students

. . .

Gifted and talented students learn more quickly and differently from their classmates. They come from every ethnic background and socioeconomic group and vary from their age peers and from other gifted students in the ways and rate at which they learn, and the domains in which they are gifted. These differences require modifications to curriculum and instruction, as well as to assessments, to ensure that these students are appropriately challenged. Too many advanced students languish in today's classrooms with little rigor and much repetition. With careful planning, the new standards offer the prospect of improving the classroom experience for high-ability students in significant ways; not only in how the new materials are developed and presented, but also the ways in which student knowledge is measured, leading to appropriate instructional decision-making.

In considering advanced students, grade-level standards will be inadequate in challenging them each day with new information. Gifted learners are well able to meet, and exceed, the core standards on a faster timetable than their age peers. Therefore, it is critical that curriculum is matched to student ability through a range of content acceleration strategies and that teachers are able to implement an array of differentiation strategies to supplement and extend the curriculum. These include a variety of flexible grouping strategies, creative and critical-thinking opportunities, and other approaches designed to add depth and complexity to the curriculum. Significantly, the professional development investment in these differentiation skills benefits the entire student spectrum. It is particularly important in schools without gifted and talented programs, often in low-income communities, where students are dependent on the regular classroom teacher to meet their needs.

Assessment is a critical component of teaching and learning and, therefore, teachers and other key personnel should be familiar with a range of student assessment tools to ensure that students are able to transfer and apply learned content. Assessments should also measure student knowledge of above-grade level standards in order to make instructional modifications necessary to ensure that advanced students are continuing to learn new material and concepts every day.

The new math and language arts standards provide an opportunity for advanced students to succeed, with the support of rigorous curriculum, teaching strategies to adjust the depth and complexity, and assessments that measure the true level of student knowledge. Standards and accompanying instructional materials that consider their needs will help gifted students and their classmates succeed. From the National Association for Gifted Children (www.nagc.org)

530

531   A synthesis of research (Rogers 2007) on the education of students identified as

532   gifted and talented suggests that they should be provided the following:

533   • Daily challenge in their specific areas of talent

534   • Regular opportunities to be unique and to work independently in their areas of
535   passion and talent
536   • Various forms of subject-based and grade-based acceleration as their
537   educational needs require
538   • Opportunities to socialize and learn with peers with similar abilities
539   • Instruction that is differentiated in pace, amount of review and practice, and
540   organization of content presentation
541   Instruction for advanced learners should focus on depth and complexity.
542 Opportunities to engage with appropriately challenging text and content, conduct
543 research, use technology creatively, and write regularly on topics that interest them can
544 be especially valuable for advanced learners; these experiences allow students to
545 engage more deeply with content and may contribute to motivation. Instruction that
546 focuses on depth and complexity ensures cohesion in learning rather than piecemeal
547 "enrichment."
548   As discussed in Chapter 3 in this framework, assessments and tasks vary in their
549 cognitive complexity, or the "depth of knowledge" (often referred to as "DoK") called
550 upon (Webb 2005). Depth of Knowledge levels include, from least to most complex, the
551 following: recall and reproduction (Level 1), skills and concepts (Level 2), strategic
552 thinking/reasoning (Level 3), and extended thinking (Level 4). The more complex tasks,
553 those at DoK levels 3 and 4, generally require more time and involve the use of more
554 resources. Advanced learners—**and all students**—should have ample opportunities to
555 engage in a mixture of tasks with particular attention to those most cognitively engaging
556 and challenging, that is, tasks involving strategic thinking/reasoning and extended
557 thinking.
558

Snapshot 9.1 Advanced Learners Collaborate to Interpret Literary Text

Mrs. Bee's grade six class has been reading *The Giver* by Lois Lowry. The class is writing an essay and creating a presentation based on the Ceremony of Twelve. The advanced learners in Mrs. Bee's class research other rite of passage ceremonies around the world and incorporate elements of their research into their presentation. Using the depth and complexity concept of rules (Sandra Kaplan Depth and Complexity icons) the students justify their choice of rite of passage elements from other cultures and explain their relevance to the themes Lois Lowry uses in *The Giver.* The five advanced students in Mrs. Bee's class meet as a literature circle as part of their independent work contract with Mrs. Bee. The literature group reviews the rules of respect (making sure everyone has the same understanding), participation (everyone actively shares), time (stay on task), and preparation (completed the reading and have questions and/or comments) contained within their independent work contract. Each person in the group has a role to fulfill before coming into the literature circle based on the required chapter reading:

- Facilitator: Facilitates the discussion, asks the questions and makes sure everyone participates, keeps everyone on task, reviews the group rules, notes any unanswered questions, is the only person from the group allowed to approach the teacher for clarification, and closes the discussion. This member also identifies any details of the character(s), setting, plot, conflict, or events to discuss.

- Illustrator: Identifies the 'big picture' that the author is trying to create. The illustrator also identifies specific quotes and creates an image based on the quote for the group, identifies other familiar images based on character(s), setting, or conflict, and assists other group members with comprehension through quick sketches, photos, or clip art.

- Connector: Looks for real-world connections in the story to other stories and/or characters, historical events, or personal experiences. Identifies what is realistic in the story or what possible historical people and/or events may have influenced the author.

- Character Sleuth: Keeps track of one main character in the story. Identifies their strengths, weaknesses, thoughts, feelings, motives, etc. Identifies how the character changes over time and what events in the story force this change to happen.

- Linguist: Identifies figurative language in context and defines the literal meaning for: theme, character(s), setting and how this enhances the telling of the story. Identify any unknown words and definitions. Identifies specific quotes and explain why the author used literary devices.

Today, the facilitator begins the group's discussion about the Ceremony of Twelve. The Illustrator and the Connector have joined forces to work cooperatively to ensure the rest of the group understands the rites of passage in other cultures, both past and present. The Character Sleuth proposes a theory regarding the main character and the Ceremony of Twelve. He prepares for the group meeting by placing sticky notes next to sections of the text that support his theory. The Linguist identifies specific figurative language that can be used in the group's presentation. The group decides to:

Categorize (basic thinking skill) – using rules to organize things that share characteristics

Note Patterns (differentiate content – depth) identifying recurring elements or repeated factors

Use Media (research skills – resources) searching contemporary and historical archives online

Make a Photo Essay (product) printing and displaying a collection of pictures on a poster with a drawing of the Ceremony of Twelve in the Center.

Conduct a Panel Discussion (product) organizing an oral presentation to debate dilemmas or controversies involved with these rites of passage (ethics)

The group's presentation idea came from the following resource:

Kaplan, S. N, Gould, B., and Siegel, Victoria. 1995. *A Quick and Easy Method for Developing Differentiated Learning Experiences.* Calabasas, CA: Educator to Educator.

CA CCSS for ELA/Literacy: RL.6.1, RL.6.2, RL.6.3, RL.6.4, SL.6.1

559

560   **Students with Disabilities**

561   In accordance with The Individuals with Disabilities Education Improvement Act

562 (IDEA), reauthorized in 2004, California provides special education and other related

563 services as a part of a free appropriate public education to students who meet the

564 criteria for any of the following (presented alphabetically): autism, deafness, deaf-

565 blindness, emotional disturbance, hearing impairment, intellectual disability, multiple

566 disabilities, orthopedic impairment, other health impairment, specific learning disability,

567 speech or language impairment, traumatic brain injury, visual impairment, including

568 blindness. (See the National Dissemination Center for Children with Disabilities for

569 detailed descriptions.)

570   Students with specific learning disabilities and speech and language impairment

571 make up approximately two-thirds of students receiving special education services

572 (Data Quest 2011). Although specific learning disabilities vary widely, difficulty reading

573 is the most common type of specific learning disability. (However, it is important to note

574 that students experiencing difficulty reading do not necessarily have a learning

575 disability. There are many causes for low achievement in reading, including inadequate

576 instruction. Under IDEA, a student who is performing below grade level may not be

577 determined to have a specific learning disability if the student's performance is primarily

578 a result of limited English proficiency or if it is due to a lack of appropriate instruction.)

579 All students with disabilities require knowledgeable teachers who work closely with

580 education specialists and families to determine how best to provide equitable access to

581 the curriculum.

582   The authors of the CCSS provided specific recommendations for ensuring that

583 students with disabilities have appropriate access to the standards. Their statement,

584 *Application to Students with Disabilities,* is provided in Figure 9.6. See Figure 9.7 for

585 information about students with autism spectrum disorders, the fastest growing

586 population of students with disabilities.

587

588 Figure 9.6. CCSSO Statement About the Application of the CCSS to Students with

589 Disabilities

Application to Students with Disabilities

The Common Core State Standards articulate rigorous grade-level expectations in the areas of mathematics and English language arts. These standards identify the knowledge and skills students need in order to be successful in college and careers.

Students with disabilities—students eligible under the Individuals with Disabilities Education Act (IDEA)—must be challenged to excel within the general curriculum and be prepared for success in their post-school lives, including college and/or careers. These common standards provide an historic opportunity to improve access to rigorous academic content standards for students with disabilities. The continued development of understanding about research-based instructional practices and a focus on their effective implementation will help improve access to mathematics and English language arts (ELA) standards for all students, including those with disabilities.

. . . *how* these high standards are taught and assessed is of the utmost importance in reaching this diverse group of students.

In order for students with disabilities to meet high academic standards and to fully demonstrate their conceptual and procedural knowledge and skills in mathematics, reading, writing, speaking and listening (English language arts), their instruction must incorporate supports and accommodations, including:

- Supports and related services designed to meet the unique needs of these students and to enable their access to the general education curriculum (IDEA 34 CFR §300.34, 2004).
- An Individualized Education Program (IEP) which includes annual goals aligned with and chosen to facilitate their attainment of grade-level academic standards.
- Teachers and specialized instructional support personnel who are prepared and qualified to deliver high-quality, evidence-based, individualized instruction and support services.

Promoting a culture of high expectations for all students is a fundamental goal of the Common Core State Standards. In order to participate with success in the general curriculum, students with disabilities, as appropriate, may be provided additional supports and services, such as:

- Instructional supports for learning— based on the principles of Universal Design for Learning

---

(UDL) —which foster student engagement by presenting information in multiple ways and allowing for diverse avenues of action and expression.

- Instructional accommodations (Thompson, Morse, Sharpe & Hall, 2005) —changes in materials or procedures—which do not change the standards but allow students to learn within the framework of the Common Core.

- Assistive technology devices and services to ensure access to the general education curriculum and the Common Core State Standards.

Some students with the most significant cognitive disabilities will require substantial supports and accommodations to have meaningful access to certain standards in both instruction and assessment, based on their communication and academic needs. These supports and accommodations should ensure that students receive access to multiple means of learning and opportunities to demonstrate knowledge, but retain the rigor and high expectations of the Common Core State Standards.

From the Common Core State Standards Initiative. 2010.
http://www.corestandards.org/assets/application-to-students-with-disabilities.pdf

590

591   Figure 9.7. Supporting Students with Autism Spectrum Disorders

Students with Autism Spectrum Disorders (ASD) represent the fastest growing population of students with disabilities. Students with ASD experience many challenges, especially in the area of social awareness – understanding how their behavior and actions affect others and interpreting the nonverbal cues (body language) of others (Constable, Grossi, Moniz, and Ryan 2013). Having difficulty in recognizing and understanding the thoughts, feelings, beliefs, and intentions of others can be problematic in regards to achieving the ELA/Literacy standards that require communication and collaboration as well as those that require interpreting the feelings, thoughts, and intentions of characters or real persons. Teachers of students with ASD need to understand how these difficulties manifest themselves in the classroom in relation to the standards as well as how to provide instruction for these students to comprehend and write narratives related to the task at hand. Although some students with ASD are able to answer questions such as 'who', 'what', and 'where,' they often struggle answering questions asking 'how' and 'why.' These issues become progressively more challenging as the demands to integrate information for various purposes increases at the secondary level. Teachers can find supports to enhance comprehension and ameliorate potentially anxious and stressful experiences by incorporating cognitive behavioral strategies identified by the National Professional Development Center on Autism Spectrum Disorders. Among important considerations are the following;

- physically positioning oneself for face-to-face interactions and establishing attention

- providing verbal models for specific tasks

- responding to students' verbal and nonverbal initiations

- providing meaningful verbal feedback
- expanding students' utterances
- ensuring students have the prerequisite skills for a task
- breaking down tasks into manageable components
- knowing and using what students find motivating
- ensuring the use of appropriately challenging and interesting tasks

592

593   Students who receive special education and related services in the public school

594   system must have an Individualized Education Program (IEP). The IEP is a federally

595   mandated individualized document specifically designed to address an individual's

596   unique needs. It includes information about the student's current performance (including

597   strengths), annual goals, and services and supports to be provided. The members of

598   the IEP team—teachers, parents, school administrators, related services personnel, and

599   students (when appropriate)—work collaboratively to improve educational results for

600   students with disabilities. ELs with disabilities should have linguistically appropriate

601   goals and objectives in their IEP in addition to all the services the student may require

602   due to their disability. The IEP serves as the foundation of a quality education for each

603   student with a disability.

604   Depending on the individualized needs, some students with disabilities may

605   receive supports and/or services with a 504 plan rather than an IEP. A "504 plan" refers

606   to Section 504 of the Rehabilitation Act and the Americans with Disabilities Act, which

607   specifies that no one with a disability can be excluded from participating in federally

608   funded programs or activities, including elementary, secondary or postsecondary

609   schooling. "Disability" in this context refers to a "physical or mental impairment that

610   substantially limits one or more major life activities." This can include physical

611   impairments; illnesses or injuries; communicable diseases; chronic conditions like

612   asthma, allergies and diabetes; and learning problems. A 504 plan spells out the

613   modifications and accommodations that will be needed for these students to have an

614   opportunity perform at the same level as their peers, and might include such things as

615   an extra set of textbooks, a peanut-free lunch environment, or a tape recorder or

616   keyboard for taking notes.

617   ***Accommodations and Modifications for Students with Disabilities***

618   Most students who are eligible for special education services are able to achieve

619   the standards when the following three conditions are met:

1. Standards are implemented within the foundational principles of Universal Design for Learning. (See previous section in this chapter.)
2. A variety of evidence-based instructional strategies are considered to align materials, curriculum, and production to reflect the interests, preferences, and readiness of diverse learners maximizing students' potential to accelerate learning.
3. Appropriate accommodations are provided to help students access grade-level content.

628   ***Accommodations*** are changes that help a student to overcome or work around

629   the disability. Accommodations do not reduce the learning or performance expectations

630   but allow the student to complete an assignment of assessment with a change in

631   presentation, response, setting, timing or scheduling so that learners are provided

632   equitable access during instruction and assessment. They also include learner-

633   appropriate behavior management techniques. See Figure 9.8.

634   More guidance is available in *The California Accommodations Guide: Selecting,*

635   *Administering, and Evaluating Accommodations for Instruction and Assessment for*

636   *Students with Disabilities* (California Department of Education 2012) and the CCSSO's

637   [*Accommodations Manual: How to Select, Administer, and Evaluate Use of*](#)

638   [*Accommodations for Instruction and Assessment of Students with Disabilities*](#)

639   (Thompson, Morse, Sharpe, and Hall 2005).

640   Figure 9.8. Types of Accommodations for Students with Disabilities

Type of Accommodation	Examples
Changes in timing or scheduling	• Extended time (e.g., to allow for limited dexterity) • Frequent breaks (e.g., to avoid physical discomfort) • Dividing assignment over several sessions (e.g., to avoid eye strain or frustration)
Changes in setting/environment	• Specialized furniture (e.g., adjustable height desk to allow for wheelchair) • Preferential seating (e.g., close to white board to support low vision or to be free from distractions) • Stabilization of instructional materials (e.g., book holder to support weak fine motor skills)
Changes in how the curriculum is presented	• Varied lesson presentation using multi-sensory techniques • Use of American Sign Language (ASL) • Provision of audio and digital versions of texts
Changes in how the student responds	• Uses large lined paper or computer for written work • Responds in Braille • Uses a recoding device to record/playback questions, passages, and responses
Behavioral strategies	• Use of behavioral management techniques appropriate for the learner • Reinforce self-monitoring and self-recording of behaviors

641

642   The selection of and evaluation of accommodations for students with disabilities

643   who are also ELs must involve collaboration among educational specialists, the

644   classroom teacher, teachers providing instruction in English Language Development,

645   families, and the student. It is important to note that ELs are disproportionately

646   represented in the population of students identified with disabilities.

647   The following five major conditions are important to consider in selecting

648   accommodations for English learners and students with disabilities (Abedi and Ewers

649   2013):

650   1. Effectiveness: An accommodation must be effective in making an assessment

651   more accessible to the recipients.

652   2. Validity: An accommodation should not alter the focal construct, i.e., the

653   outcomes of accommodated and non-accommodated assessments should be

654   comparable.

655   3. Differential Impact: An accommodation should be sensitive to student's

656   background characteristics, and their academic standing, i.e., one size may not

657   fit all.

658   4. Relevance: An accommodation should be appropriate for the recipients.

659   5. Feasibility: An accommodation must be logistically feasible to implement in the

660   assessment setting.

661   Unlike accommodations, *modifications* are adjustments to an assignment or

662   assessment that changes what is expected or measured. Modifications should be used

663   with caution as they alter, change, lower, or reduce learning expectations and can

664   increase the gap between the achievement of students with disabilities and

665   expectations for proficiency. Examples of modifications include:

666   • Reducing the expectations of an assignment or assessment (completing fewer

667   problems, amount of materials or level of problems to complete),

668   • Making assignments or assessment items easier, or

669   • Providing clues to correct responses.

670   Accommodations and modifications play important roles in helping students with

671   disabilities access the core curriculum and demonstrate what they know and can do.

672   The student's IEP or 504 Plan team determines the appropriate accommodations and

673   modifications for both instruction and state and district assessments. Decisions about

674   accommodations and modifications must be made on an individual student basis, not on

675   the basis of category of disability or administrative convenience. For example, rather

676   than selecting accommodations and modifications from a generic checklist, IEP and 504

677   Plan team members (including families and the student) need to carefully consider and

678   evaluate the effectiveness of accommodations for each student.

679   Accommodations and modifications support equitable instruction and

680   assessment for students by lessening the effects of a student's disability. Without

681   accommodations and modifications, students with disabilities may have difficulty

682   accessing grade level instruction and participating fully on assessments. When

683   possible, accommodations and modifications should be the same or similar across

684   classroom instruction, classroom tests and state/district assessments. However, some

685 accommodations and modifications may be appropriate only for instructional use and

686 may not be appropriate for use on a standardized assessment. It is crucial that

687 educators are familiar with state policies regarding accommodations used during

688 assessment.

689   ***Serving Students with Disabilities***

690   Depending upon the learner and the identified needs, different types and

691 configurations of special services are provided to students with disabilities, ranging from

692 consultative to intensive instruction. ***The education specialist and general education***

693 ***teacher share responsibility*** for developing and implementing Individualized

694 Education Programs, ensuring students with disabilities are provided optimal support

695 toward achievement of their highest potential, and communicating and collaborating

696 with families in culturally and linguistically appropriate ways.

697   Some students with disabilities are served exclusively in the general education

698 class and do not receive instruction directly from the education specialist. The specialist,

699 however, consults with the general education teacher, providing resources, professional

700 learning, and other support. Furthermore, the education specialist, along with the

701 general education teacher, monitors the student's progress.

702   Some students with disabilities receive core instruction in the general education

703 class as well as instruction from the specialist when needed, either in the general

704 education setting or in a special education setting. The general educator receives

705 guidance from the specialist and the two (or more) collaborate to provide the student

706 with optimal instruction. At times, general educators and education specialists engage in

707 co-teaching; the general educator and the education specialist deliver instruction in the

708 same general classroom setting to a blended group of students (that is, those with and

709 without identified disabilities). There are several models of co-teaching (Bacharach,

710 Heck, and Dahlberg 2010, Friend and Bursuck 2009), some of which are presented in

711 Figure 11.7 in Chapter 11.

712   Some students with disabilities require highly specialized or intensive intervention

713 instruction from the educational specialist in an alternative setting outside of the general

714 education classroom. These students participate in general education classes and

715   interact with students without disabilities to the maximum extent appropriate given the

716   nature of their disabilities.

717

Snapshot 9.2 Differentiated Instruction in a Grade Nine Co-Taught Language Arts Class

Ms. Williams, a general education language arts teacher, and Ms. Malouf, a special education teacher, co-teach an English 9 class of 36 students, nine of whom are students receiving specially designed instruction to support Individualized Education Program (IEP) goals for reading comprehension and written expression. The class is studying the literature of Edgar Allan Poe and supplementary informational documents.

After being introduced to Poe's life and reading selected poems and short stories, students are placed strategically into one of three groups and assigned one of three unique grade-level informational texts addressing different theories of Poe's cause of death, which will be used for part of their summative assessment at the conclusion of the unit, an argumentative essay.

As routinely practiced, the co-teachers carefully plan the groupings to ensure that membership is not static but changes frequently to ensure that all students have the opportunity to move across learning groups that best correspond to the instructional purpose and students' instructional skills, interests, and needs. In addition, Ms. Williams and Ms. Malouf switch their instructional roles to ensure shared responsibility for teaching all students. They also make sure that accommodations are provided as identified on the IEPs for students with disabilities. In their classroom, two students are provided digitized text and specialized software to access the text with auditory supports and visual enhancements and another student has access to a portable word processor with grammar/word spell check software to take notes and complete written assignments.

For today's lesson, the students are grouped according to the level of scaffolding and differentiated instruction needed to comprehend the text, with the final objective for all students to evaluate the three different theories. One group is given a text and provided with instructions on use of engagement structures to utilize while working on their assignment. They will work collaboratively in small groups of three to four, to identify and annotate claims and supporting textual evidence, as well as to provide elaboration to explain how the evidence supports the author's claim. The students are provided with elaboration stems as well as sentence starters to help support their meaningful engagement in listening and speaking. Ms. Williams and Ms. Malouf takes turns monitoring the small groups periodically throughout the instructional period.

Groups two and three are composed of students who need direct teacher support to navigate, comprehend, and respond to the text. Each group is provided one of the two remaining texts and works together with direct support from either Ms. Williams or Ms. Malouf to complete the same assignment as group one, focusing specifically on claims and supporting evidence. They are also provided with elaboration stems and sentence starters to help support their meaningful engagement in listening and speaking. The teachers differentiate instruction using read alouds and think alouds while providing

---

additional visual supports by displaying, highlighting, and chunking the text using document cameras. All three groups are held to the same rigorous expectations and standards.

After the three groups are finished, each group of students presents their claims and evidence. As each group presents, the students add necessary facts and details as information is being shared, read, or discussed into an advanced organizer prepared by the teachers to support and interpret the incoming information. The students will continue to complete their organizers after they receive the other two texts to annotate.

At the end of class, students are given an Exit Slip with a prompt as a way for Ms. Williams and Ms. Malouf to assess how accurately students can independently express the authors' claims and the ways they support those claims. The Exit Slip provides an informal measure of the students' understanding, allowing the teachers to adapt and differentiate their planning and instruction for the following lesson.

At the end of the unit, students will write an argumentative essay using their completed advanced organizer as well as copies of all three texts.

Additional support is provided to some of the students in this class through enrollment in an English 9 supplemental support class with Ms. Malouf. This class is closely aligned to the English 9 course and is designed to provide additional time and support to assist students to achieve in the course and to build skills in which they are struggling. The lower teacher-to-student ratio in the class allows for targeted direct instruction based on student needs and designed to accelerate students to grade level. In addition, Ms. Malouf is able to pre-teach and reteach lessons and skills from the English 9 course by providing additional scaffolds as needed for learning and gradually removing them as students gain skills.

718

719 **Planning for and Supporting the Range of Learners**

720   This section of the chapter focuses on classroom-and school/district-level

721 processes and structures for planning for and supporting all of California's learners in

722 transitional kindergarten through grade twelve. It begins with a discussion of Universal

723 Design for Learning and then presents information about Multi-Tiered System of

724 Supports (MTSS) and the implementation of culturally and linguistically responsive

725 pedagogy.

726   **Universal Design for Learning**

727   Universal Design for Learning (UDL) is a research-based framework for guiding

728 educational practice. (See www.udlcenter.org.) Based on the premise that "one-size-

729 fits-all" curricula create unintentional barriers to learning for many students, including

730   the mythical "average" student, UDL focuses on **planning instruction** in such a way to

731   meet the varied needs of students. Not a special education initiative, UDL

732   acknowledges the needs of all learners at the point of "first teaching," thereby reducing

733   the amount of follow-up and alternative instruction necessary.

734   UDL involves the use of effective teaching practices and the intentional

735   differentiation of instruction from the outset to meet the needs of the full continuum of

736   learners. Teachers who employ UDL attend to how information is shared along with

737   choices of action, expression, and engagement. In other words, as they plan, general

738   education teachers consider different ways to present information and content, different

739   ways the students can express what they know, and different ways of stimulating

740   students' interest and motivation for learning--all based on students' needs (CAST

741   2011). Principles and guidelines for the implementation of UDL are summarized in

742   Figure 9.9, which is followed by a more detailed text discussion.

743

744   Figure 9.9. UDL Principles and Guidelines (CAST 2011)

Principle *Provide multiple means of...*	Guidelines *Provide options for...*
I. Representation	1. Perception 2. Language, mathematical expressions, and symbols 3. Comprehension
II. Action and Expression	4. Physical action 5. Expression and communication 6. Executive functions
III. Engagement	7. Recruiting interest 8. Effort and persistence 9. Self-regulation

745

746   *Principle I: Provide multiple means of representation to give students various*

747   *ways of acquiring, processing, and integrating information and knowledge.*

748   Guideline 1: Provide options for perception.

749   • Customize the display of information (for example, change the size of text

750   or images or changing the volume of speech)

751 • Provide alternatives for auditory information (for example, provide written
752 transcripts or use American Sign Language)

753 • Provide alternatives for visual information (for example, provide
754 descriptions of images, tactile graphics, or physical objects)

755 Guideline 2: Provide options for language, mathematical expressions, and
756 symbols.

757 • Clarify vocabulary and symbols (for example, provide a glossary or
758 graphic equivalents or teach word components)

759 • Clarify syntax and structure (for example, highlight transition words)

760 • Support decoding of text or mathematical notation (for example, use digital
761 text with accompanying human voice recording)

762 • Promote understanding across languages (for example, use the language
763 of the students)

764 • Illustrate key concepts through multiple media (for example, provide
765 illustrations, simulations, or interactive graphics or make explicit the
766 connections between text and illustrations, diagrams, or other
767 representations of information)

768 Guideline 3: Provide options for comprehension.

769 • Activate or supply background knowledge (for example, use advanced
770 organizers and make explicit cross-curricular connections)

771 • Highlight patterns, critical features, big ideas, and relationships (for
772 example, use outlines to emphasize important ideas or draw students'
773 attention to critical features)

774 • Guide information processing, visualization, and manipulation (for
775 example, provide explicit prompts for each step in a sequential process)

776 • Maximize transfer and generalization (for example, embed new ideas in
777 familiar contexts)

778 ***Principle II: Provide multiple means of action and expression to provide students***
779 ***with options for navigating and demonstrating learning.***

780 Guideline 4: Provide options for physical action.

781   • Vary the methods for response and navigation (for example, provide
782   learners with alternatives to responding on paper)
783   • Integrate assistive technologies (for example, have touch screens and
784   alternative keyboards accessible)
785   Guideline 5: Provide multiple tools for construction and composition.
786   • Use multiple media for communication (for example, provide options for
787   composing, such as in text and film)
788   • Provide appropriate tools for composition and problem solving (for
789   example, provide concept mapping tools)
790   • Build fluencies with graduated levels of support for practice and
791   performance (for example, provide more or less scaffolding depending
792   upon the learner)
793   Guideline 6: Provide options for executive functions.
794   • Guide appropriate goal-setting (for example, support learners in estimating
795   the difficulty of a goal)
796   • Support planning and strategy development (for example, support learners
797   in identifying priorities and a sequence of steps)
798   • Facilitate managing information and resources (for example, provide
799   guides for note-taking)
800   • Enhance capacity for monitoring progress (for example, prompt learners to
801   identify the type of feedback they seek)
802   ***Principle III: Provide multiple means of engagement to tap individual learners'***
803   ***interests, challenge them appropriately, and motivate them to learn***.
804   Guideline 7: Provide options for recruiting interest.
805   • Optimize individual choice and autonomy (for example, provide learners
806   choice in the order they accomplish tasks)
807   • Optimize relevance, value, and authenticity (for example, provide home
808   and community audiences for students' work)
809   • Minimize threats and distractions (for example, ensure respectful
810   interactions and provide quiet spaces)
811   Guideline 8: Provide options for sustaining effort and persistence.

812   •   Heighten salience of goals and objectives (for example, periodically

813   discuss a targeted goal and its value)

814   •   Vary demands and resources to optimize challenge (for example, provide

815   a range of resources appropriate for the learner)

816   •   Foster collaboration and communication (for example, offer structures for

817   group work and discuss expectations)

818   •   Increase mastery-oriented feedback (for example, provide timely and

819   specific feedback)

820   Guideline 9: Provide options for self-regulation.

821   •   Promote expectations and beliefs that optimize motivation (for example,

822   help students set personal goals)

823   •   Facilitate personal coping skills and strategies (for example, share

824   checklists for managing behavior)

825   •   Develop self-assessment and reflection (for example, support students in

826   identifying progress toward goals)

827   When initial instruction is planned in such a way that it flexibly addresses learner

828 variability, more students are likely to succeed. Fewer students will find the initial

829 instruction inaccessible and therefore fewer will require additional, alternative "catch up"

830 instruction.

831   **Multi-Tiered System of Supports**

832   A coordinated system of supports and services is crucial for ensuring appropriate

833 and timely attention to students' needs. The Multi-Tiered System of Supports (MTSS)

834 model expands California's Response to Intervention and Instruction (RtI^2) process by

835 aligning all systems of high quality first instruction, support, and intervention and

836 including structures for building, changing, and sustaining systems. The foundational

837 structures of MTSS include high-quality core instruction utilizing Universal Design for

838 Learning (UDL) principles and appropriate supports, strategies, and accommodations.

839 In addition, assessments and progress monitoring are employed to allow for a data-

840 based, problem-solving approach to instructional decision-making.

841   Like RtI^2, MTSS incorporates the three tiers structure of increasing levels of

842 supports and begins with the establishment of strong core instruction in Tier 1. These

843 tiers reflect the intensity of instruction, not specific programs, students, or staff (i.e., Title

844 1 or special education). The tiers are discussed here (adapted from Ventura County

845 Office of Education 2011) and displayed in Figure 9.10.

846   • **Tier 1**: Tier 1 core/universal instruction, also known as "first teaching," is

847   differentiated instruction delivered to ***all students in general education***.

848   Differentiated instruction is the use of a variety of evidence-based instructional

849   approaches to transform the materials, curriculum, and production in response

850   to the interests, preferences, and readiness of diverse learners. It is not a

851   program but a way for teachers to think effectively about whom they teach,

852   where they teach, and how they teach to maximize all students' academic

853   potential (Glass 2009). Teachers design instruction for this tier in accordance

854   with the principles of UDL (see previous section in this chapter). The goal is that

855   all students receive high quality standards-aligned instruction, using culturally

856   and linguistically responsive teaching (see next section in this chapter), that

857   meets the full range of student needs. ELD instruction is part of this core first

858   teaching for ELs. Shared expectations for behavior helps to create learning

859   environments in which students know the expected behavior. Valid universal

860   screenings that identify students' progress toward identified goals are reliably

861   administered to ensure all students benefit from core instruction. Tier 1

862   instruction should result in no less than 80% of students achieving grade-level

863   expectations. If less than 80% do not succeed in Tier 1 instruction, schools must

864   engage in close examination of the curriculum and teaching practices and make

865   appropriate adjustments.

866   • **Tier 2**: Tier 2 is strategic/targeted instruction and supports provided to ***some***

867   ***students***--those who are not progressing or responding to Tier 1 efforts as

868   expected. Generally, no more than 15% of students receive support at this level

869   because Tier 1, first teaching, is excellent. Tier 2 instructional supports are

870   provided to students ***in addition*** to what they receive in Tier 1. The

871   supplemental instruction provided in Tier 2 may be an extension of the core

872   curriculum utilized in Tier 1 or may include instruction and materials specifically

873   designed for intervention. Tier 2 instruction may take a variety of forms. At the

874   elementary level, Tier 2 support might entail daily 30 minutes of targeted

875   instruction to small groups for six to eight weeks. At the secondary level, Tier 2

876   support might include temporary support (before, during or afterschool) during

877   which students are pre-taught or retaught concepts taught in the core

878   curriculum. The model used is determined by schools or districts in accordance

879   with local needs and structures. In both elementary and secondary settings,

880   targeted students are provided more time and more focused instruction directed

881   to specific learning needs. Students' progress toward identified goals is

882   monitored frequently. The expectation is that supplemental support is temporary

883   and that students will make significant growth to succeed in Tier 1.

884   • **Tier 3**: Tier 3 consists of intensive intervention. It is necessary for ***very few***

885   ***students***, approximately five percent. Students who receive these services are

886   those who have experienced difficulty with the grade-level standards in the

887   general education curriculum and have not benefitted from Tier 2 supplemental

888   instruction they received. More intensive, Tier 3, intervention may occur in a

889   learning center or may be at a different pace than Tier 2 instruction. The

890   instruction for elementary students in Tier 3 might be for 40-60 minutes daily for

891   a period of six to eight weeks, although some students may need intensive

892   intervention for longer periods of time. Tier 3 intervention for secondary students

893   might consist of a double block of daily instruction for a semester or longer.

894   Instruction focuses on skill and concept development. However, access and

895   alignment to grade-level CA CCSS for ELA/Literacy is critical for these students

896   and careful planning is required to integrate interventions and standards. In both

897   elementary and secondary settings, the instructional goal is to provide research-

898   based intervention more often and for longer periods of time with reduced

899   student/teacher ratios. The intention is to accelerate students' progress so they

900   can return to and succeed in the core instructional program, that is, Tier 1.

901   9.10. Multi-tiered System of Supports (MTSS)

Tier 3

Intensive, Individualized Supports

- Intensive interventions based on individual student needs
- Students receiving prolonged interventions at this level may be several grade levels behind or above the one in which they are enrolled
- Progress monitoring occurs most often to ensure maximum acceleration of student progress
- If more than approximately 5% of students are receiving support at this level, engage in Tier 1 and Tier 2 level, systemic problem-solving

Tier 2

Targeted, Supplemental Supports

- Interventions are based on data revealing that students need more than core, universal instruction
- Interventions and progress monitoring are targeted to specific skills to remediate or enrich, as appropriate
- Progress monitoring occurs more frequently than at the core, universal level to ensure that the intervention is working
- If more than approximately 15% of students are receiving support at this level, engage in Tier 1 level, systemic problem-solving

Tier 1

Core, Universal Supports

- Research-based, high-quality, general education instruction and support
- Screening and benchmark assessments for all students
- Assessments occur for all students
- Data collection continues to inform instruction
- If less than approximately 80% of students are successful given core, universal instruction, engage in Tier 1 level problem-solving

Florida's Response to Instruction/Intervention website: http://www.florida-rti.org/index.htm

UDL occurs at the planning phase in all tiers, beginning in Tier 1.

902   Adapted from Florida's Response to Instruction/Intervention website: http://www.florida-

903   rti.org/index.htm.

904   MTSS occurs in the context of excellent curricula, effective instruction, and a

905 comprehensive assessment system as well as effective leadership, professional

906 learning and an empowering culture. (See Figure 9.11.) Schools and districts should

907 have in place a well defined framework for MTSS, including a leadership and

908 organizational structures, routines for program evaluation and progress monitoring of

909 students, initial and ongoing professional learning for all educators, and clear two-way

910 communication between parents and educators.

930

931   Additional considerations for ELs: Instruction and assessment must be both

932 *linguistically and culturally congruent* in order for it to be appropriate for ELs (Brown and

933 Doolittle, 2008), and students' cultural and linguistic backgrounds should be taken into

934 account when determining appropriate approaches to instruction and intervention. For

935   additional information, see the section in this chapter on Linguistic and Cultural

936   Congruence for ELs.

937   **Culturally and Linguistically Responsive Teaching**

938   In order to create truly equitable classrooms, schools, and districts—ones that

939   support all students' achievement of the capacities of literate individuals—educators

940   must continuously strive for social justice, access, and equity. This requires educators

941   to adopt a stance of inquiry toward their practice and to engage in ongoing,

942   collaborative discussions with their colleagues about challenging issues, including race,

943   culture, language, and equity. The National Center for Culturally Responsive

944   Educational Systems (NCCRESt) highlights the importance of creating a shared

945   responsibility for cultural responsiveness:

946   Culturally responsive educational systems are grounded in the belief that we

947   live in a society where specific groups of people are afforded privileges that

948   are not accessible to other groups. By privileging some over others, a class

949   structure is created in which the advantaged have more access to high

950   quality education and later, more job opportunities in high status careers.

951   This leads to socio-economic stratification and the development of

952   majority/minority polarity. We can turn the tide on this institutionalized

953   situation by building systems that are responsive to cultural difference and

954   seek to include rather than exclude difference. … Moreover, culturally

955   responsive educational systems create spaces for teacher reflection,

956   inquiry, and mutual support around issues of cultural differences. (NCCRESt

957   2008, 15)

958   Culturally and linguistically responsive teaching and equity-focused approaches

959   emphasize validating and valuing students' cultural and linguistic heritage while also

960   ensuring their full development of standard English (SE), and more precisely, academic

961   English. Simply immersing students in SE and ignoring differences between SE and the

962   dialects of English that Standard English Learners use is ineffective because "extensive

963   overlaps in vocabulary, phonology, and grammar can cause speakers to miss subtle but

964   significant differences between their own and the target dialect" (Rickford 1999, 12).

965   Teachers should adopt an "additive" approach toward the culture and language

966   development of their students by enacting the following principles:

- **Self-educate**: Teachers should develop an awareness of and positive disposition toward their students' cultural and linguistic heritage, their communication styles, and of their students' dialects of English (LeMoine 1999; McIntyre and Turner 2013; Moll and González 1994).

- **Draw on and value students' cultural backgrounds**: Teachers should learn about their students' lives and make connections between their experiences, backgrounds, and interests and content learning (McIntyre and Turner 2013).

- **Address language status**: Teachers should treat all languages and all dialects of English in the classroom as equally valid and valuable and take the stance that multilingualism and dialect variation is natural. In addition, teachers should make transparent for their students, in developmentally appropriate ways, that while standard English is the type of English privileged in school, bilingualism and "bidialecticism," or proficiency in multiple dialects of English, are highly valued assets (Harris-Wright 1999).

- **Expand language awareness**: Teachers should develop their students' understandings of how, why, and when to use different registers and dialects of English to meet the expectations of different contexts and balance activities that develop students' awareness of English varietal differences and similarities while also acknowledging the need for students to fully develop academic English. When appropriate, teachers should include their students' primary language or dialect in instruction. Making the hidden curriculum of language visible in respectful and pedagogically sound ways is one way of ensuring the civil rights of linguistically diverse students (Christie 1999; Delpit 1995).

- **Support the development of academic English**: Teachers should focus instruction on intellectually rich and engaging tasks that allow students to use academic English in meaningful ways. Teachers should also make transparent to students how academic English works to make meaning in different disciplines. This includes helping students to develop "register awareness" so that they understand how to meet the language expectations of different contexts (Schleppegrell 2004; Spycher 2013).

997   •   **Promote pride in cultural and linguistic heritage**: Language and culture are

998   inextricably linked, and students' dispositions toward school learning are affected

999   by the degree to which schools convey that students' cultural and linguistic

1000   heritage are valued. Therefore, teachers should allow—and indeed encourage—

1001   their students to use their primary language(s) and dialects when appropriate in

1002   the classroom and infuse cultural and linguistic heritage into the curriculum (Gay

1003   2000).

1004 **Instructional Practices for Supporting Students Experiencing Difficulty Reading**

1005   In this section, guidance is provided regarding research-based instruction for

1006 students who are experiencing difficulty with reading, whether due to a disability or not.

1007 As noted in a previous section of this chapter, the largest group of students with

1008 disabilities are those with specific learning disabilities, which often involves difficulty

1009 reading. In addition, many students without disabilities demonstrate poor reading

1010 achievement. Presented here are general guidelines for supporting students

1011 experiencing difficulty with reading; *what is appropriate for individuals will vary*

1012 *depending on many factors*, including the particular needs, age, language proficiency

1013 in English and in the primary language, cultural and linguistic backgrounds,

1014 circumstances, and past experiences of the students. Instruction should take place in

1015 the context of a supportive, respectful environment that communicates high

1016 expectations of all students. Furthermore, attention must be paid to student motivation

1017 (see Chapters 1 and 3).

1018   Support for students experiencing difficulty begins with close attention to

1019 students' progress and, for ELs, includes consideration of primary language and literacy

1020 skills, knowledge, and abilities. Ideally, students complete the primary grades with a

1021 good working command of foundational skills; a rapidly expanding vocabulary and

1022 increasingly complex syntactic structures and developing body of content knowledge;

1023 the ability to comprehend and communicate about a variety of text types on their grade

1024 level, including making inferences and making connections with other texts and

1025 knowledge; and an interest in engaging with texts both as composers and consumers.

1026 This early solid foundation best positions all learners for future success.

1027   However, even when learners receive the highest quality, differentiated first

1028   instruction (UDL and MTSS Tier 1), some may experience difficulty for any number of

1029   reasons. The most effective interventions occur at the first sign of difficulty, whatever

1030   the grade level. Teachers must be observant and responsive, and Multi-Tiered System

1031   of Supports must be in place in schools. Much can be accomplished with immediate

1032   action. Some interventions will be short term; others will demand more time. The more

1033   severe the difficulty, the more time will be required. And, the older the students, the

1034   more time will be required. Vaughn and her colleagues (2012b, p. 523) note "there is

1035   accumulating evidence that remediating reading problems in students after fourth grade

1036   will require a long-term commitment; it may be necessary to provide reading

1037   interventions throughout secondary school while also increasing instructional practices

1038   such as vocabulary and comprehension enhancements within content-area instruction."

1039   Attentive educators and careful diagnosis, therefore, are crucial (see Chapter 8).

1040   A report by Vaughn and others (2012a, p. 5) identifies research-based practices

1041   for supporting students experiencing difficulty with reading. They are summarized here.

1042   Many overlap with the recommendations provided by Gersten and colleagues (2008).

1043   ***Depending upon students' response to differentiated first instruction and to initial***

1044   ***interventions and depending upon their particular needs, ages, circumstances,***

1045   ***and past experiences,*** the following practices result in achievement gains:

1046   • Integrating strategies that support cognitive processing (e.g., self-regulation and

1047   memory) with academic instruction by:

1048   – Thinking aloud to demonstrate, for example, approaches to a task and

1049   reflections on a text

1050   – Teaching students to use self-regulation strategies by, for example, asking

1051   what they do when they do not recognize a word in a text

1052   – Teaching students to be metacognitive and to identify and repair

1053   "breakdowns" in understanding

1054   – Teaching explicitly memory enhancement techniques, such as taking notes

1055   and using graphic organizers or other text organizers

1056   – Providing task-specific feedback (e.g., "your organizing paragraph in this

1057   paper made it clear what you are addressing throughout, which is very helpful

1058   to readers") rather than person-directed feedback (e.g., "you are a good

1059   writer") so students attribute success to effort and behavior rather than

1060   personal, fixed abilities

1061   • Intensifying instructional delivery by

1062   – Making instruction explicit, which includes clear explanations and teacher

1063   modeling

1064   – Making instruction systematic, which includes breaking down complex skills

1065   into manageable chunks and sequencing tasks from easier to more difficult

1066   with the provision of scaffolding to control the level of difficulty

1067   – Providing students with frequent opportunities to respond and practice with

1068   immediate and precise, task-specific teacher feedback

1069   – Providing students with independent practice, appropriately developed so that

1070   students demonstrate mastery of new skills at a high level of success

1071   • Increasing instructional time by increasing one or more of the following, as

1072   appropriate for the age, characteristics, needs, and progress of the students

1073   while also balancing time for interventions with time for other curricular areas:

1074   – Frequency of intervention (for example, from three days to five days a week)

1075   – Length of instructional sessions (for example, from 20 minute to 30 minutes

1076   per session—age and engagement of the learner must be considered)

1077   – Duration of intervention (that is, extend the period of time over which

1078   interventions are delivered from 20 sessions, for example, to 40 sessions)

1079   • Reducing group size

1080

Snapshot 9.3 Direct Instruction of Metaphors with Grade Four Students Who Have a Learning Disability and Those Experiencing Difficulty in ELA

Mr. Fajardo's class consists of several students with learning disabilities and nearly half the class is achieving below grade level in reading and writing. He knows that his students require explicit, carefully sequenced instruction along with ample practice and immediate feedback in order to achieve lesson objectives. Employing a direct instruction model of teaching (see Chapter 3 of this framework), he begins his lesson on verbs as metaphors by reminding the students of a book he and the class recently enjoyed. He opens the book and reads aloud a metaphor he had tagged. He indicates pleasure with the author's language, drawing attention to the figurative language: "Listen to that! Madeleine L'Engle* writes, 'The

moon ripped through' the clouds! What a terrific image—almost violent! That matches the setting. It was a stormy night." He states that the objective of current lesson is that the students will be able to identify this type of metaphor. He reminds them that they already know about nouns as metaphors. At the conclusion of today's lesson will be able to define verb metaphors and determine whether a statement contains metaphorical use of a verb. Mr. Fajardo explains that this is important because metaphors of several kinds are commonly used in oral and written text—as well as in popular culture, such as songs and raps—and are a powerful way to convey ideas. Mr. Fajardo then provides students with a definition of the concept and he returns to the example he shared at the opening of the lesson. He notes explicitly how it meets the definition. He provides a number of additional examples, including "He shot down my idea" and "My heart filled with joy." He contrasts them with sentences that do not contain metaphorical use of verbs. Mr. Fajardo then uses a document camera to reveal, one at a time, eight statements. When he reads each one aloud, students use their personal red and green cards, with which they have had ample practice in other lessons, to indicate whether or not the statement being displayed contains a verb used as a metaphor. They hold up the green card if it does and the red card if it does not. The teacher closely observes students' responses, checking for understanding, and provides additional explanation to the group as appropriate. Then, students are given time to practice with a peer. Each pair is provided a set of sentence strips. Some sentences include verb metaphors; others do not. Student pairs sort the strips into two groups while Mr. Fajardo circulates and provides assistance as necessary. When the students have completed the sorting, they briefly discuss each sentence and identify the verb metaphor. He summarizes the lesson and restates the objective. For independent practice, the students record any verb metaphors they find in the texts they are reading independently or that they observe being used in conversations or in media, such as songs or television newscasts. They bring their examples to class the following day and share them.

*L'Engle, Madeleine. *A Wrinkle in Time.* 1962. New York: Dell.

CA CCSS for ELA/Literacy: L.4.5

1081

1082   Regular, careful monitoring of students' progress (including students' behavior

1083   and attitudes) must occur to ensure that instructional approaches and interventions are

1084   appropriate and effective. Formative assessments—those conducted in the moment in

1085   the immediate context of instruction—can prove very valuable for informing instruction.

1086   (See Chapter 8.)

1087   Of critical importance is the monitoring of the acquisition of the foundational skills

1088   in the early grades. Acquisition of these skills is fundamental to progress in literacy

1089   achievement. Children experiencing difficulty with the code, including building fluency,

1090   must be provided immediate support. Intensifying instruction, increasing instructional

1091   time, reducing group size, and providing ample practice with text in meaningful contexts

1092   are crucial for these students.

1093   Given the complex nature of the English language arts and literacy, it is

1094   imperative that teachers recognize the many ways students may experience difficulty.

1095   Among them are difficulties with the code, difficulties making meaning, language

1096   limitations (e.g., limited vocabulary) or mismatches, and inadequate relevant content

1097   knowledge. In addition, students may not be engaged for any number of reasons,

1098   including that they are not motivated by the curriculum, instruction, or texts or that they

1099   do not perceive themselves as having the potential to achieve at the same level as their

1100   peers in the classroom context. Any of these areas may need to be the target of

1101   support. In addition, it is also important for teachers of ELs to recognize that, by

1102   definition, ELs are learning English as they are also engaging in literacy tasks in

1103   English. What may appear to be a reading difficulty may, in fact, be normal English

1104   language development. For additional information on determining appropriate

1105   instruction and intervention approaches for ELs, see *A Cultural, Linguistic, and*

1106   *Ecological Framework for Response to Intervention with English Language Learners*

1107   (Brown and Doolittle 2008).

1108   As noted in the report by Vaughn and others (2012a) summarized above,

1109   systematic instruction includes breaking down complex tasks into smaller segments.

1110   Teachers will find it helpful to "unpack" the standards to identify what the students need

1111   to do and be able to do as teachers work to plan for and implement instruction. Figure

1112   9.12 identifies some components of a sampling of CA CCSS for ELA/Literacy.

1113   Figure 9.12. Components of Four CA CCSS for ELA/Literacy

CA CCSS for ELA/Literacy	Among the components are the following:
RFS.1.2c Isolate and pronounce initial, medial vowel, and final sounds (phonemes) in spoken single-syllable words.	• Isolate and pronounce initial sounds (phonemes) in spoken single-syllable words • Isolate and pronounce medial vowel sounds (phonemes) in spoken single-syllable words • Isolate and pronounce final sounds (phonemes) in spoken single-syllable words
RI.5.5 Compare and contrast the overall structure (e.g., chronology, comparison, cause/effect, problem/solution) of events, ideas, concepts, or information in two or more texts.	• Identify an overall chronology text structure • Identify an overall comparison text structure • Identify an overall cause-effect text structure • Identify an overall problem/solution text structure • Compare overall chronology and comparison text structures (and other combinations of overall text structures) of two or more texts • Contrast overall cause/effect and problem/solution text structures (and other combinations of overall text structures) of two or more texts
SL.2.1 Ask and answer questions about key details in a text read aloud or information presented orally or through other media. a. Give, restate, and follow simple two-step directions.	• Ask questions about details in a text read aloud • Ask questions about information presented orally or through other media • Answer questions about details in a text read aloud • Answer questions about information presented orally or through other media • Give simple two-step directions • Restate simple two-step directions • Follow simple two-step directions
WHSSSTS.9-10.4 Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.	• Produce clear and coherent writing in which the development is appropriate to the task • Produce clear and coherent writing in which the organization is appropriate to the task • Produce clear and coherent writing in which the style is appropriate to the task • Produce clear and coherent writing in which the development is appropriate to the purpose

CA CCSS for ELA/Literacy	Among the components are the following:
	• Produce clear and coherent writing in which the organization is appropriate to the purpose
	• Produce clear and coherent writing in which the style is appropriate to the purpose
	• Produce clear and coherent writing in which the development is appropriate to the audience
	• Produce clear and coherent writing in which the organization is appropriate to the audience
	• Produce clear and coherent writing in which the style is appropriate to the audience

1114

1115   A significant component of the CA CCSS for ELA/Literacy is engaging with

1116   complex texts. All students must be provided the opportunity, with appropriate

1117   instructional support, to engage with texts that are more challenging than those they can

1118   read independently. In Chapter 3 of this framework, Figure 3.10 displays strategies for

1119   supporting all learners' engagement with complex text and additional supports for

1120   linguistically diverse learners. Here, Figure 9.13 duplicates the previous figure and adds

1121   a column in which particular supports for students with learning disabilities or who are

1122   experiencing difficulties reading are offered. The figure provides general guidelines, and

1123   any of the strategies may be useful for any student. It is important that teachers know

1124   their students, assess their understanding during instruction, and appreciate that

1125   students' successful engagement with complex texts demands excellent teaching.

1126   Figure 9.13. Strategies for Supporting Learners' Engagement with Complex Text

	Teachers support *all* students' understanding of complex text by...	Additional, amplified, or differentiated support for linguistically diverse learners may include...	Additional, amplified, or differentiated support for students with learning disabilities or students experiencing difficulties reading may include…
Background Knowledge	• Leveraging students' existing background knowledge	• Drawing on primary language and home culture to make connections with existing background knowledge • Developing students' awareness that their background knowledge may "live" in another language or culture	• Providing visual supports and think-alouds to aid in connecting new content to build background knowledge • Engaging in activities to activate students' relevant prior knowledge • Previewing introductory materials
Comprehension Strategies	• Teaching and modeling, through thinking aloud and explicit reference to strategies, how to make meaning from the text using specific reading comprehension strategies (e.g., questioning, visualizing) • Providing multiple opportunities to employ learned comprehension strategies	• Emphasizing a clear focus on the goal of reading as meaning making (with fluent decoding an important skill) while ELs are still learning to communicate through English	• Explicit modeling and discussion of strategies and opportunities for practice with guidance in meaningful contexts • Ensuring ample opportunities for success

	Teachers support *all* students' understanding of complex text by...	Additional, amplified, or differentiated support for linguistically diverse learners may include...	Additional, amplified, or differentiated support for students with learning disabilities or students experiencing difficulties reading may include…
Vocabulary	• Explicitly teaching vocabulary critical to understanding and developing academic vocabulary over time • Explicitly teaching how to use morphological knowledge and context clues to derive the meaning of new words as they are encountered	• Explicitly teaching cognates and about particular cognates • Making morphological relationships between languages transparent (e.g., word endings for nouns in Spanish , –dad, -ión, ía, encia) that have the English counterparts (–ty, -tion/-sion, -y, -ence/-ency)	• Integrating media as context to gain meaning to the content to illustrate, define complex vocabulary (e.g. *erosion*, *tsunami*) • Planning for multiple opportunities to apply key words • Building from informal to formal understanding
Text Organization and Grammatical Structures	• Explicitly teaching and discussing text organization, text features, and other language resources, such as grammatical structures (e.g., complex sentences) and how to analyze them to support comprehension	• Delving deeper into text organization and grammatical features in texts that are new or challenging and necessary to understand in order to build content knowledge • Drawing attention to grammatical differences between the primary language and English (e.g., word order differences)	• Drawing attention to similarities and differences in text organization, features, and contrast text structures
Discussions	• Engaging students in peer discussions--both brief and extended--to promote collaborative sense making of text and opportunities to use newly acquired vocabulary	• Structuring discussions that promote equitable participation, academic discourse, and the strategic use of new grammatical structures and specific vocabulary	• Strategically forming groups to best support students experiencing difficulty

	Teachers support *all* students' understanding of complex text by...	Additional, amplified, or differentiated support for linguistically diverse learners may include...	Additional, amplified, or differentiated support for students with learning disabilities or students experiencing difficulties reading may include…
Sequencing	• Systematically sequencing texts and tasks so that they build upon one another • Continuing to model close/ analytical reading of complex texts during teacher read-alouds while also ensuring students build proficiency in reading complex texts themselves	• Focusing on the language demands of texts and carefully sequencing tasks to build understanding and effective use of the language in them •	• Offering texts at students' readability levels that explain key ideas to build proficiency in reading in preparation for engaging students in more difficult text
Rereading	• Rereading the text or selected passages to look for answers to questions or to clarify points of confusion	• Rereading the text to build understanding of ideas and language incrementally (e.g., beginning with literal comprehension questions on initial readings and moving to inferential and analytical comprehension questions on subsequent reads) • Repeated exposure to the rich language over time, focusing on particular language (e.g., different vocabulary) during each reading	• Strategically chunking and rereading text to maintain engagement to construct and clarify ideas and organize them and to provide opportunities for success

	Teachers support *all* students' understanding of complex text by...	Additional, amplified, or differentiated support for linguistically diverse learners may include...	Additional, amplified, or differentiated support for students with learning disabilities or students experiencing difficulties reading may include…
Tools	• Teaching students to develop outlines, charts, diagrams, graphic organizers or other tools to summarize and synthesize content	• Explicitly modeling how to use the outlines or graphic organizers to analyze/discuss a model text and providing guided practice for students before they use the tools independently • Using the tools as a scaffold for discussions or writing	• Offering technology tools to develop outlines, charts, diagrams, or graphic organizers to summarize and synthesize content and providing opportunities to collaboratively (with the teacher and with peers) develop and use tools
Writing	• Teaching students to return to the text as they write in response to the text and providing them with models and feedback	• Providing an opportunity for students to talk about their ideas with a peer before (or after) writing • Providing written language models (e.g., charts of model phrasing, important words, sentence and text frames), as appropriate	• Using graphic organizers to help students organize their thoughts before writing • Allowing for students to express ideas with labeled drawings, diagrams, or graphic organizers

1127

1128   In addition to monitoring students' progress and immediately providing

1129 appropriate instruction, it is essential to involve and listen to parents and families. They

1130 can provide crucial information and insights about the learner, and their influence on

1131 students' learning and motivation is considerable (Roberts 2013).

1132   **Linguistic and Cultural Congruence for ELs**

1133   For ELs, instruction and assessment must be both *linguistically and culturally*

1134 *congruent* in order for it to be appropriate (Brown and Doolittle 2008), and students'

1135 cultural and linguistic backgrounds should be taken into account when determining

1136 appropriate approaches to instruction and intervention. Special consideration should be

1137 given to a student's linguistic proficiency in their primary language, and a strategic

1138   combination of primary language proficiency assessments, English language proficiency

1139   assessments, and English literacy assessments helps teachers to tailor their language

1140   and literacy instruction and monitor progress appropriately (Esparza-Brown 2011;

1141   Linan-Thompson and Ortiz 2009).

1142   If an EL student experiences difficulty with literacy achievement, the type of

1143   instruction the student receives should be examined along with student assessment

1144   data in order to ensure that the student is not erroneously identified as in need of

1145   interventions, including special education services, when the instruction itself was not

1146   culturally and linguistically appropriate and of the highest instructional caliber. As Brown

1147   and Doolittle (2008, 6) note,

1148   When an ELL student becomes a focus of concern, the instructional program

1149   itself must be examined to determine the match between the demands of the

1150   curriculum and the child's current level of proficiency in the language of

1151   instruction. It is important to examine the achievement of the student's "true

1152   peers" (similar language proficiencies, culture and experiential background) to

1153   see if they are excelling or not. If several "true peers" are struggling, this is an

1154   indication that the instruction is less than optimal for that group of students.

1155   Careful attention to the particular linguistic and cultural learning needs of individual

1156   students ensures their opportunity to thrive in school and prevents disproportionate

1157   (under and over representation) of ELs and other student populations in special

1158   education. Guidance on using screening and progress monitoring tools for ELs in Multi-

1159   tiered System of Supports, is provided in the National Center on Response to

1160   Intervention's *RTI for English Language Learners: Appropriately Using Screening and*

1161   *Progress Monitoring Tools to Improve Instructional Outcomes* (Brown and Sanford

1162   2011).

1163   **Literacy Learning and Males**

1164   The disparity in educational performance between males and females has been

1165   widely reported in terms of college attendance and completion, high school completion,

1166   and reading test scores (Cornwell, Mustard, and Van Parys 2012) with females

1167   outperforming males across all categories and racial groups. An examination of the

1168   English language arts scores on the California Standards Test confirms this conclusion

1169 (CDE, DataQuest 2013). Cornwell, Mustard, and Van Parys argue that teachers

1170 (predominantly female in elementary school) disproportionately weigh behavior, such as

1171 sitting for long periods, demonstrating knowledge in the classroom, and supplying effort

1172 on assignments, in their assessments of children's performance.

1173   Tailoring classroom instruction in literacy to capture and sustain the interest and

1174 effort of boys and young men has been discussed for many years (Smith and Wilhelm

1175 2002, 2006; Zambo and Brozo 2008), as has the needs of African-American males

1176 (Tatum 2006, 2008, 2009, McWhorter 2006). Special attention should be paid to the

1177 performance of males in literacy, particularly boys and young men of color.

1178   Wood and Jocius (2013) recommend an approach with black males that

1179 incorporates culturally relevant texts, collaboration, and critical conversations. Engaging

1180 students with texts that reflect themselves as protagonists is important to help students

1181 connect in more personal ways. "Teachers need to carefully design literacy experiences

1182 that both encourage critical examination of texts and foster personal and emotional

1183 connections" (665). Tatum (2009) argues for literacy as a collaborative act and selecting

1184 "enabling texts" that connect with the lives of African American adolescent males inside

1185 and outside of school. Serafini (2013) suggests a number of practices to reach all boys:

1186 • Provide wider access to reading materials

1187   – Books and texts should focus on plot, be visually appealing, purposeful,

1188   relatable, edgy, and humorous.

1189 • Balance fiction and informational texts

1190   – Support browsing

1191   – Use shorter texts

1192   – Provide extended amounts of time to read

1193   – Reduce the focus on after reading activities

1194   – View reading as a social activity

1195   – Focus on visual and multimodal texts

1196   – Invite male readers into the classroom

1197   – Develop boys' identities as readers

1198   Actively engaging all youth in reading, writing, thinking, and communicating is critically

1199   important; it is even more so for boys and young men who may otherwise not see the

1200   potential of literacy for opening windows into their worlds and beyond.

1201   **Conclusion**

1202   California is committed to equity and access for all learners. Ensuring that all

1203   learners achieve their highest potential is a challenging and multi-faceted endeavor, but

1204   it is one that can be accomplished by knowledgeable, skillful, and dedicated teams of

1205   educators who work closely with families and equally dedicated communities. Our

1206   children and youth deserve no less, and our state and nation will be stronger as a result.
