

VMware Horizon VDI Instruction

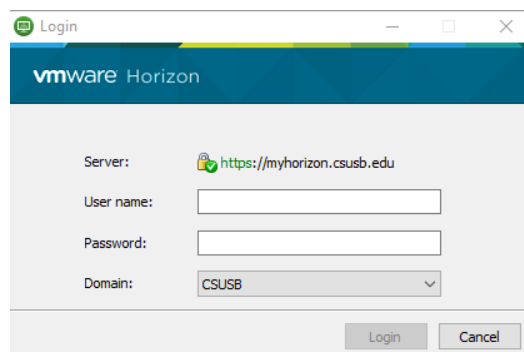

1. Type "myhorizon.csusb.edu" on your Internet browser, and hit "Enter"
2. Click "**Install VMware Horizon Client**" to continue.
3. Choose the client you need to download, and click "**Go to Downloads**" to continue. Next, Select the latest version, and click "**Download**" to download the file.
4. After download is completed, double click on the file to start installation process. Then click "**Agree & Install**". After the installation process is completed, click "**Finish**", and then click "**Restart Now**" to restart your computer.
NOTE: Save your work before restarting your computer.
5. After the computer restarts, there is a "**VMware Horizon Client**" icon on the desktop. Double-click on the icon to start VMware Horizon Client.

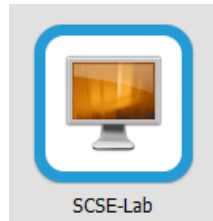

6. Click "**New Server**", and enter "myhorizon.csusb.edu", and click "**Connect**" to continue.

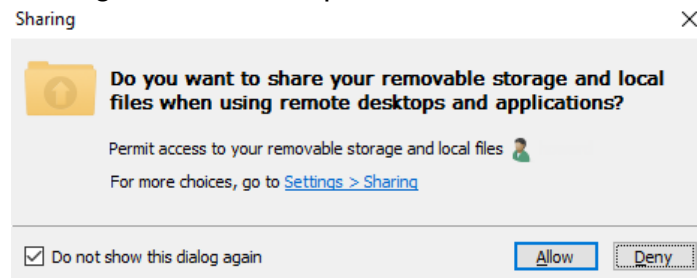

7. At Login window, enter your Coyote ID and Coyote password, and then click "**Login**".

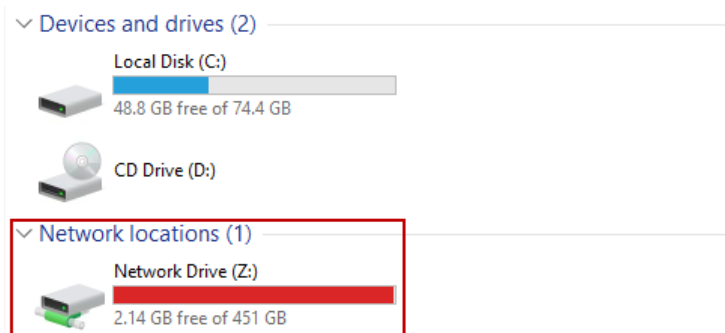

8. A “**SCSE-LAB**” icon will be created, double-click on the icon to connect to the server.

9. After you login for the first time, you will be asked if you want to share your removable storage and local files when using remote desktop. Click “**Allow**” to continue.

10. The above step mounts your local computer hard drive as network drive in VMware. If you need to save your work on your local computer, make sure you click “**Browse** → **This PC**” and double-click on “**Network Drive**”

11. Once you are done, on the top bar click “**Options** → **Disconnect and log off**” to end the session.
