## **SUMMARY:**

The environment and climate are changing in extreme ways that have significant consequences for human health and the environment now and for future generations. This presentation will address the changes in the global environment, the connections with the environment and some of the solutions.

## **ABOUT THE SPEAKER:**

Dr. Andrea Hinwood serves as the Chief Scientist of the United Nations Environment Program (UNEP). She is an Environmental Scientist with expertise in environmental exposures and impacts on human health. Dr. Hinwood earned a Ph.D. in environmental epidemiology from the Monash University in Melbourne, Australia. She served as the first Chief Environmental Scientist at the Environment Protection Authority (EPA) in Victoria, Australia and was previously an Associate Professor at Edith Cowan University.
