

Feynman Technique

The Feynman Technique is a method of learning by teaching. Here's how you can use it to study effectively

Choose a subject & study

Choose a subject you want to understand, then take time to study it thoroughly.

Teach the Subject

Teach the subject to someone else. As you explain it, you'll start to notice gaps in your understanding.

Fill in the Gaps

Now go back and study, focusing specifically on the areas where you found gaps in your understanding.

Simplify & Repeat

Try explaining the subject again, this time using simpler language. Repeat the process until you can explain it clearly and confidently.
